## METHOD OF INHIBITING NEUROTROPHIN-RECEPTOR BINDING

## RELATED APPLICATION

This application claims the benefit of U.S. Provisional Application Serial No.: 60/134,578, filed May 17, 1999, the contents of which are incorporated herein 5 by reference in their entirety.

## BACKGROUND OF THE INVENTION

The neurotrophins are a family of structurally and functionally related proteins, including Nerve Growth Factor (NGF), Brain-Derived Neurotrophic Factor (BDNF), Neurotrophin-3 (NT-3), Neurotrophin-4/5 (NT-4/5) and Neurotrophin-6 10 (NT-6). These proteins promote the survival and differentiation of diverse neuronal populations in both the peripheral and central nervous systems (Hefti, 1986; Hefti and Weiner, 1986; Levi-Montalcini, 1987; Barde, 1989; Leibrock *et al.*, 1989; Maisonnier *et al.*, 1990; Rosenthal *et al.*, 1990; Hohn *et al.*, 1990; Gotz *et al.*, 1994; Maness *et al.*, 1994) and are involved in the pathogenesis of diverse 15 neurological disorders. Neurotrophins exert many of their biological effects through specific interactions with a class of transmembrane receptor tyrosine kinases (trkA, trkB and trkC) (Kaplan *et al.*, 1991; Klein *et al.*, 1991, 1992; Soppet *et al.*, 1991; Squinto *et al.*, 1991; Berkemeier *et al.*, 1991; Escandon *et al.*, 1993; Lamballe *et al.*, 1991). Specificity of neurotrophin action results from their selective interactions 20 with the trk receptors. That is, trkA only binds NGF (Kaplan *et al.*, 1991; Klein *et al.*, 1991); trkB binds BDNF and NT-4/5 (Soppet *et al.*, 1991; Squinto *et al.*, 1991; Berkemeier *et al.*, 1991; Escandon *et al.*, 1993; Lamballe *et al.*, 1991; Klein *et al.*, 1992; Vale and Shooter, 1985; Baracid, 1993); and trkC exclusively binds NT-3 25 (Lamballe *et al.*, 1991; Vale and Shooter, 1985). This is particularly evident when the trk receptors are coexpressed with the common neurotrophin receptor p75<sup>NTR</sup>. (For review see Meakin and Shooter, 1992; Baracid, 1993; Chao, 1994; Bradshaw *et al.*, 1994; Ibáñez, 1995).

The common neurotrophin receptor p75<sup>NTR</sup> is a transmembrane glycoprotein structurally related to the tumor necrosis factor and CD-40 receptors (Meakin and

Shooter, 1992; Rydén and Ibáñez, 1996). As all neurotrophins bind to p75<sup>NTR</sup> with similar affinity (Rodriguez-Tébar *et al.*, 1990; Hallböök *et al.*, 1991; Rodriguez-Tébar *et al.*, 1992; Ibáñez, 1995), neurotrophin specificity is conventionally thought to be caused by the binding selectivity for trk receptors which are differentially expressed in different neuronal populations (Ibáñez, 1995). However, accumulated experimental data on neurotrophin activity reveal important functional aspects of p75<sup>NTR</sup> (Heldin *et al.*, 1989; Jing *et al.*, 1992; Herrmann, 1993; Barker and Shooter, 1994; Dobrowsky *et al.*, 1994; Matsumoto *et al.*, 1995; Marchetti *et al.*, 1996; Washiyama *et al.*, 1996). The common neurotrophin receptor enhances functions and increases binding specificity of trk receptors (Barker and Shooter, 1994; Mahadeo *et al.*, 1994; Chao and Hempstead, 1995; Rydén and Ibáñez, 1996). In addition, p75<sup>NTR</sup> possesses unique, trk-independent signaling properties which involve ceramide production through activation of the sphingomyelin cycle (Dobrowsky *et al.*, 1994), apoptosis (cell death) (Van der Zee *et al.*, 1996; Cassac-Bonnefil *et al.*, 1996; Frade *et al.*, 1996), and activation of the transcription factor NF $\kappa$ B (Carter *et al.*, 1996). Recently, p75<sup>NTR</sup> has been demonstrated to participate in human melanoma progression (Herrmann *et al.*, 1993; Marchetti *et al.*, 1996). Furthermore, NGF and NT-3 increase the production of heparin by 70W melanoma cells, which is associated with their metastatic potential (Marchetti *et al.*, 1996). Although this effect has been shown to be mediated by the common neurotrophin receptor, neither BDNF nor NT-4/5 appeared to be active.

Due to the implication of NGF/p75<sup>NTR</sup> binding in various disease states, a need exists for pharmaceutical agents and methods of use thereof for interfering with the binding of NGF to the p75<sup>NTR</sup> common neurotrophin receptor.

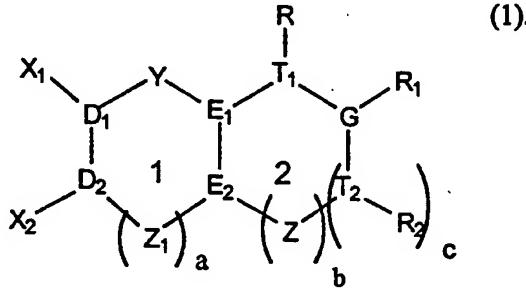

## 25 SUMMARY OF THE INVENTION

The present invention relates to the discovery of molecular structural features which contribute to the ability of a compound to inhibit the binding of NGF to the common neurotrophin receptor p75<sup>NTR</sup>. Compounds which have these features are of use, for example, for inhibiting binding of NGF to p75<sup>NTR</sup>. Such compounds can also be used to treat a patient having a condition which is mediated, at least in part, by the binding of NGF to p75<sup>NTR</sup>.

In one embodiment, the present invention relates to compositions which inhibit the binding of nerve growth factor to the p75<sup>NTR</sup> common neurotrophin receptor and methods of use thereof.

In one embodiment, the compound which inhibits binding of nerve growth factor to p75<sup>NTR</sup> comprises at least two of the following: (1) a first electronegative atom or functional group positioned to interact with Lys<sup>34</sup> of nerve growth factor; (2) a second electronegative atom or functional group positioned to interact with Lys<sup>95</sup> of nerve growth factor; (3) a third electronegative atom or functional group positioned to interact with Lys<sup>88</sup> of nerve growth factor; (4) a fourth electronegative atom or functional group positioned to interact with Lys<sup>32</sup> of nerve growth factor; and (5) a hydrophobic moiety which interacts with the hydrophobic region formed by amino acid residues of nerve growth factor, including Ile<sup>31</sup>, Phe<sup>101</sup> and Phe<sup>86</sup>. Such inhibitors, preferably, bind nerve growth factor via at least two of the foregoing interactions.

15 In one embodiment, compounds which inhibit binding of nerve growth factor to p75<sup>NTR</sup> have Formula 1,

In Formula 1, D<sub>1</sub>, D<sub>2</sub>, E<sub>1</sub>, E<sub>2</sub> and G are each, independently, an sp<sup>2</sup>-hybridized carbon or nitrogen atom. One of X<sub>1</sub> and X<sub>2</sub> is a hydrogen atom or absent, while the other is an electronegative atom or an electronegative functional group. R and R<sub>2</sub> are each, independently, an electronegative atom or an electronegative functional group, such as O, S, CH<sub>2</sub>, or NR<sub>3</sub>, where R<sub>3</sub> is H, alkyl, preferably C<sub>1</sub>-C<sub>6</sub>-alkyl, or aryl, such as phenyl. R, R<sub>2</sub> and one of X<sub>1</sub> and X<sub>2</sub> can also each be, independently, an electronegative atom or functional group, such as alkylcarbonyl; alkylthiocarbonyl; alkoxy carbonyl; aminocarbonyl; -OH; -CN; -CO<sub>2</sub>H; -SO<sub>3</sub>H; -SO<sub>2</sub>H; -PO<sub>3</sub>H<sub>2</sub>; -NO<sub>2</sub>;

20

25

-ONO<sub>2</sub>, -CNO, -SH, -CNS, -OSO<sub>3</sub>H, -OC(O)(OH); halomethyl, dihalomethyl or trihalomethyl group or a fluorine, chlorine, bromine or iodine atom. Y is N, O, S, C-L or N-L, where L is H, alkyl, preferably C<sub>1</sub>-C<sub>6</sub>-alkyl, or an electronegative atom or functional group, such as, but not limited to, alkylcarbonyl; alkylthiocarbonyl;

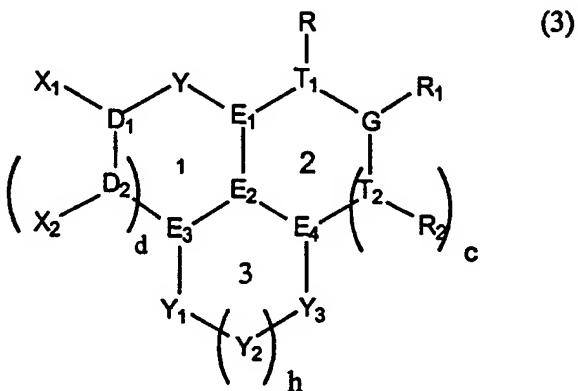

5 alkoxycarbonyl; aminocarbonyl; -OH; -CN; -CO<sub>2</sub>H; -SO<sub>3</sub>H; -SO<sub>2</sub>H; -PO<sub>3</sub>H<sub>2</sub>; -NO<sub>2</sub>; -ONO<sub>2</sub>, -CNO, -SH, -CNS, -OSO<sub>3</sub>H, -OC(O)(OH); halomethyl, dihalomethyl or trihalomethyl groups or a halogen atom, such as a fluorine, chlorine, bromine or iodine atom. Z and Z<sub>1</sub> are each, independently, O, S, CH, C(O), N, NH, N-alkyl, N-cycloalkyl and N-P, where P is a carbohydrate moiety, such as a monosaccharide

10 group, for example, a fucosyl, glucosyl, galactosyl, mannosyl, fructosyl, galactosyl, idosyl, talosyl, allosyl, altrosyl, ribosyl, arabinosyl, xylosyl or lyxosyl group. T<sub>1</sub> and T<sub>2</sub> are each, independently, an sp<sup>2</sup>- or sp<sup>3</sup>-hybridized carbon or nitrogen atom. a, b, and c are each 0 or 1, provided that at least one of b and c is 1. R<sub>1</sub> is a monocyclic or polycyclic aryl or heteroaryl, monosaccharide or oligosaccharide, alkyl, cycloalkyl,

15 arylalkyl, alkylamino or alkoxy group which is substituted with at least one substituent selected from the group consisting of electronegative atoms and electronegative functional groups.

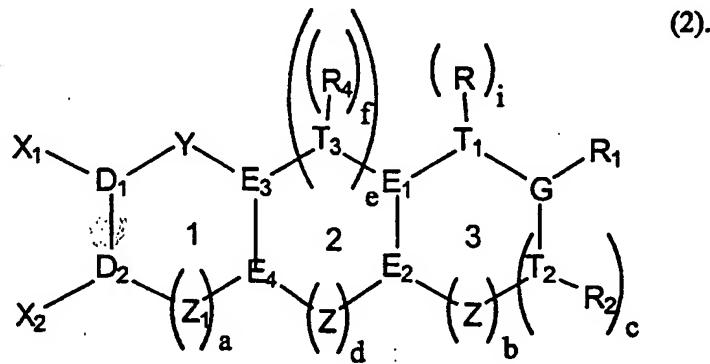

It will be appreciated that in this and the following structures, the lines connecting the variables can be single or double bonds. In addition, hydrogen atoms 20 are added to the variables as necessary to complete the valence of the atom.

In another embodiment, the NGF/p75<sup>NTR</sup> binding inhibitor has Formula 3

where  $D_1$ ,  $D_2$ ,  $X_1$ ,  $X_2$ ,  $Y$ ,  $E_1$ ,  $E_2$ ,  $T_1$ ,  $T_2$ ,  $R$ ,  $G$ ,  $R_1$ ,  $R_2$ , and  $c$  have the meanings given above for these variables in Formula 1.  $Y_1$ ,  $Y_2$ , and  $Y_3$  are independently selected from the identities given for  $Y$  in Formula 1.  $E_3$  and  $E_4$  are each, independently, an  $sp^2$ - hybridized carbon or nitrogen atom, and  $d$  and  $h$  are, independently, 0 or 1.

5 In another embodiment, compounds which inhibit the binding of nerve growth factor to  $p75^{NTR}$  have Formula 2,

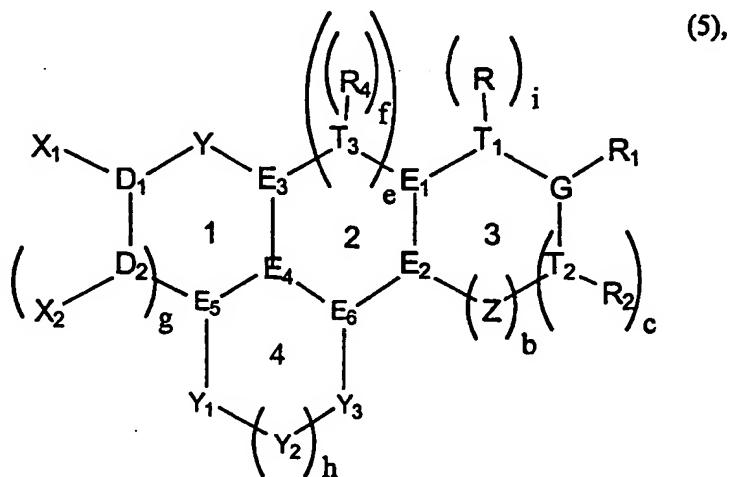

In Formula 2,  $D_1$ ,  $D_2$ ,  $E_1$ ,  $E_2$ ,  $E_3$ ,  $E_4$  and  $G$  are each, independently, an  $sp^2$ -hybridized carbon or nitrogen atom. One of  $X_1$  and  $X_2$  is a hydrogen atom or absent, while the 10 other is an electronegative atom or an electronegative functional group.  $R$ ,  $R_2$  and  $R_4$  are each, independently, an electronegative atom or an electronegative functional group, such as O, S,  $CH_2$ , or  $NR_3$ , where  $R_3$  is H, OH, alkyl, preferably  $C_1$ - $C_6$ -alkyl, or aryl, such as phenyl.  $R$ ,  $R_2$  and one of  $X_1$  and  $X_2$  can also each be, independently, an electronegative atom or functional group, such as alkylcarbonyl; 15 alkylthiocarbonyl; alkoxycarbonyl; aminocarbonyl; -OH; -CN;  $-CO_2H$ ;  $-SO_3H$ ;  $-SO_2H$ ;  $-PO_3H_2$ ;  $-NO_2$ ;  $-ONO_2$ ;  $-CNO$ ;  $-SH$ ;  $-CNS$ ;  $-OSO_3H$ ;  $-OC(O)(OH)$ ; halomethyl, dihalomethyl or trihalomethyl group or a fluorine, chlorine, bromine or iodine atom.  $Y$  is N, O, S, C-L or N-L, where L is H, alkyl, preferably  $C_1$ - $C_6$ -alkyl, or an electronegative atom or functional group, such as, but not limited to, 20 alkylcarbonyl; alkylthiocarbonyl; alkoxycarbonyl; aminocarbonyl; -OH; -CN;  $-CO_2H$ ;  $-SO_3H$ ;  $-SO_2H$ ;  $-PO_3H_2$ ;  $-NO_2$ ;  $-ONO_2$ ;  $-CNO$ ;  $-SH$ ;  $-CNS$ ;  $-OSO_3H$ ;  $-OC(O)(OH)$ ; halomethyl, dihalomethyl or trihalomethyl groups or a halogen atom, such as a fluorine, chlorine, bromine or iodine atom.  $Z$  and  $Z_1$  are each, independently, O, S,  $CH$ ,  $C(O)$ , N, NH, N-alkyl, N-cycloalkyl and N-P, where P is a 25 carbohydrate moiety, such as a monosaccharide group, for example, a fucosyl,

glucosyl, galactosyl, mannosyl, fructosyl, gulosyl, idosyl, talosyl, allosyl, altrosyl, ribosyl, arabinosyl, xylosyl or lyxosyl group.  $T_1$ ,  $T_2$  and  $T_3$  are each, independently, an  $sp^2$ - or  $sp^3$ -hybridized carbon or nitrogen atom. When  $f$  is 0,  $T_3$  can further have the meanings given for  $Z$  and  $Z_1$ , above.  $a$ ,  $b$ ,  $c$ ,  $d$ ,  $e$ ,  $f$ ,  $g$ ,  $h$  and  $i$  are each 0 or 1,

5 provided that at least one of  $b$  and  $c$  is 1, at least one of  $d$  and  $e$  is 1 and at least one of  $f$  and  $i$  is 1.  $R_1$  is a monocyclic or polycyclic aryl or heteroaryl, monosaccharide or oligosaccharide, alkyl, cycloalkyl, arylalkyl, alkylamine or alkoxy group which is substituted with at least one substituent selected from the group consisting of electronegative atoms and electronegative functional groups.

10 In another embodiment, a compound which inhibits the binding of NGF to p75<sup>NTR</sup> has Formula 5,

wherein  $D_1$ ,  $D_2$ ,  $X_1$ ,  $X_2$ ,  $E_1$ ,  $E_2$ ,  $E_3$ ,  $T_1$ ,  $T_2$ ,  $T_3$ ,  $Z$ ,  $G$ ,  $R$ ,  $R_1$ ,  $R_2$ ,  $R_4$ ,  $b$ ,  $e$ ,  $f$ ,  $i$ , and  $c$  have the meanings given for these variables in Formula 2.  $Y_1$ ,  $Y_2$ , and  $Y_3$  are

15 independently selected from the identities given for  $Y$  in Formula 2, and  $h$  is 0 or 1.  $E_5$  and  $E_6$  are each, independently, an  $sp^2$ - hybridized carbon or nitrogen atom, and  $g$  is 0 or 1. Ring 4 can be further unsubstituted or substituted with one or more substituents, such as alkyl or aryl groups.

20 In another embodiment, the invention provides a pharmaceutical composition comprising at least one compound of the invention, or pharmaceutically acceptable salt thereof, in combination with a pharmaceutically acceptable carrier or excipient.

The invention also provides a method of inhibiting the binding of nerve growth factor to the p75<sup>NTR</sup> receptor. The method comprises contacting cells which express the p75<sup>NTR</sup> receptor with a nerve growth factor/p75<sup>NTR</sup> binding inhibitor of the invention in an amount which is sufficient to inhibit binding of nerve growth 5 factor to the p75<sup>NTR</sup> receptor. The method can be practiced *in vivo* or *in vitro*.

In another embodiment, the invention relates to a method of treating a condition in a patient which is mediated by the binding of nerve growth factor to the p75<sup>NTR</sup> receptor. The method comprises administering to the patient a therapeutically effective amount of a nerve growth factor/p75<sup>NTR</sup> binding inhibitor of 10 the invention. Preferably, the compound to be administered selectively inhibits the binding of nerve growth factor to p75<sup>NTR</sup> in cells which do not express the NGF receptor trkA.

#### BRIEF DESCRIPTION OF THE DRAWINGS

Figure 2 illustrates examples of electronegative functional groups.

Figure 3 sets forth a synthetic pathway for certain compounds of the invention; Pg = protecting group.

Figure 4 sets forth a synthetic pathway for certain compounds of the 20 invention.

Figure 5 sets forth a synthetic pathway for certain compounds of the invention.

#### DETAILED DESCRIPTION OF THE INVENTION

Nerve growth factor (also referred to hereinafter as "NGF") is a neurotrophin 25 implicated in the pathogenesis of Alzheimer's disease, epilepsy and pain (Ben and Represa, 1990; McKee *et al.*, 1991; Leven and Mendel, 1993; Woolf and Doubell, 1994; Rashid *et al.*, 1995; McMahon *et al.*, 1995). The binding of NGF to its receptors is determined by distinct sequences within its primary amino acid structure. While several regions of NGF participate in the NGF/trkA interaction,

mutation studies suggest that relatively few key residues, namely those located in the NGF amino and carboxyl termini, are required for high affinity binding.

NGF displays high and low affinity binding sites in sensory and sympathetic neurons and in pheochromocytoma PC12 cells (Sutter *et al.*, 1979; Landreth and 5 Shooter, 1980; Schechter and Bothwell, 1981). The coexpression of the common neurotrophin p75<sup>NTR</sup> receptor with trkA is required to form the high affinity binding site (Hempstead *et al.*, 1991; Barker and Shooter, 1994; Mahadeo *et al.*, 1994; Chao and Hempstead, 1995). Several models of the trkA-p75<sup>NTR</sup> interaction have been proposed to explain high affinity NGF binding (Bothwell, 1991; Chao, 1992b; Chao 10 and Hempstead, 1995; Wolf *et al.*, 1995; Ross *et al.*, 1996; Ross *et al.*, 1997). These models differ with respect to direct (conformational model) or indirect (ligand-presentation model) interaction of p75<sup>NTR</sup> with trkA. Direct trkA-p75<sup>NTR</sup> interaction is consistent with much of the existing experimental data.

The hairpin loop at residues 29-35 of NGF is responsible for recognition by 15 p75<sup>NTR</sup> (Ibáñez *et al.*, 1992; Radziejewski *et al.*, 1992), while the amino and carboxyl termini are important binding determinants for recognition by the trkA receptor (Shih *et al.*, 1994; Moore and Shooter, 1975; Suter *et al.*, 1992; Burton *et al.*, 1992; Kahle *et al.*, 1992; Luo and Neet, 1992; Drinkwater *et al.*, 1993; Treanor *et al.*, 1995; Taylor *et al.*, 1991; Shamovsky *et al.*, 1998; Shamovsky *et al.*, 1999; 20 WO 98/06048). Truncation of either the amino or carboxyl terminus of NGF produces less active NGF analogues; similarly most deletion or point mutations of the amino terminus also lead to NGF analogues with diminished activity (Shih *et al.*, 1994; Burton *et al.*, 1992, 1995; Kahle *et al.*, 1992; Drinkwater *et al.*, 1993; Treanor *et al.*, 1995; Taylor *et al.*, 1991). On the other hand, the NGFΔ2-8 (NGF with 25 residues 2-8 removed) and NGFΔ3-9 deletion mutants are almost as active as wild type NGF (Drinkwater *et al.*, 1993). These NGF structure-activity relationships in combination with the considerable species variability (mouse, human, guinea pig and snake) of the amino acid sequence of the NGF termini (McDonald *et al.*, 1991) are of potential value in understanding the NGF/trkA interaction.

30 NGF exerts its biological activity as a non-covalent dimer (Treanor *et al.*, 1995; Burton *et al.*, 1995; McDonald *et al.*, 1991; Ibáñez *et al.*, 1993; Bothwell and Shooter, 1977). Two 118 residue NGF monomers are dimerized by hydrophobic

and van der Waals interactions between their three anti-parallel pairs of  $\beta$ -strands; consequently, the amino terminus of one NGF monomer and the carboxyl terminus of the other are spatially juxtaposed (McDonald *et al.*, 1991). Furthermore, although a dimer has 2 pairs of termini, only one pair of termini is required for trkA receptor 5 recognition (Treanor *et al.*, 1995; Burton *et al.*, 1995).

The X-ray crystallographic 3-dimensional structure of a dimeric mouse NGF (mNGF) has been reported (McDonald *et al.*, 1991). However, within this structure, the amino terminus (residues 1-11) and the carboxyl terminus (residues 112-118) remain unresolved for both pairs of termini. High flexibility of the NGF termini 10 makes it difficult to experimentally determine their bioactive conformations, particularly since transition metal ions commonly used in X-ray crystallography (McDonald *et al.*, 1991) have high affinity for His residues (Gregory *et al.*, 1993) which are present in the NGF amino terminus (Bradshaw *et al.*, 1994). Indeed, conformational alterations in the receptor binding domains of NGF caused by  $Zn^{2+}$  15 cations leading to its inactivation have been described recently (Ross *et al.*, 1997). Since the amino and carboxyl termini are crucial for NGF bioactivity as mediated via trkA and because of the significance of NGF in multiple neurologic disease processes, the determination of the biologically active conformation of these termini is an important and challenging problem for computational chemistry.

20 The present invention relates to the discovery of molecular structural features which contribute to the ability of a compound to inhibit the binding of NGF to the common neurotrophin receptor  $p75^{NTR}$ . Compounds which have these features are of use, for example, for inhibiting binding of NGF to  $p75^{NTR}$ . Such compounds can also be used to treat a patient having a condition which is mediated, at least in part, 25 by the binding of NGF to  $p75^{NTR}$ .

Certain compounds which inhibit the binding of NGF to  $p75^{NTR}$  are disclosed in copending U.S. patent application, serial no. 09/292,450, incorporated herein by reference in its entirety.

In one embodiment, the present invention provides compounds which inhibit 30 the binding of nerve growth factor (NGF) to the  $p75^{NTR}$  receptor. The compounds have at least two of the following characteristics: (1) a first electronegative atom or functional group positioned to interact with Lys<sup>34</sup> of NGF; (2) a second

electronegative atom or functional group positioned to interact with Lys<sup>95</sup> of NGF; (3) a third electronegative atom positioned to interact with Lys<sup>88</sup> of NGF; (4) a fourth electronegative atom or functional group positioned to interact with Lys<sup>32</sup> of NGF; and (5) a hydrophobic moiety which interacts with the hydrophobic region 5 formed by Ile<sup>31</sup>, Phe<sup>101</sup> and Phe<sup>86</sup> of NGF. A compound having two or more of these structural attributes is referred to herein as an "NGF/p75<sup>NTR</sup> binding inhibitor". Preferably, the NGF/p75<sup>NTR</sup> binding inhibitor has at least three of the foregoing attributes when bound to NGF, more preferably at least four such attributes. Most 10 preferably, the NGF/p75<sup>NTR</sup> binding inhibitor has each of the five foregoing attributes. Typically, an NGF/p75<sup>NTR</sup> binding inhibitor of the invention interacts with NGF via at least two of the foregoing interactions when bound to NGF.

The term "electronegative atom", as used herein, refers to an atom which carries a partial or full negative charge in a particular compound under physiological conditions. The electronegative atom can be, for example, an oxygen atom, a 15 nitrogen atom, a sulfur atom or a halogen atom, such as a fluorine, chlorine, bromine or iodine atom. Preferably the electronegative atom is an oxygen atom. The term "electronegative functional group", as used herein, refers to a functional group which includes at least one electronegative atom. Electronegative groups include acid functional groups and other polar functional groups. For example, suitable 20 electronegative functional groups include, but are not limited to, carbonyl, thiocarbonyl, ester, imino, amido, carboxylic acid, sulfonic acid, sulfenic acid, sulfamic acid, phosphonic acid, boronic acid, sulfate ester, hydroxyl, mercapto, cyano, cyanate, thiocyanate, isocyanate, isothiocyanate, carbonate, nitrate and nitro groups. It is to be understood that, unless otherwise indicated, reference herein to an 25 acidic functional group also encompasses salts of that functional group in combination with a suitable cation.

An electronegative atom of the NGF/p75<sup>NTR</sup> binding inhibitor bears a full or partial negative charge under physiological conditions and can, therefore, interact electrostatically with the positively charged side chain of an NGF lysine residue. 30 This will be an interaction, such as, for example, a hydrogen bond, an ion/ion interaction, an ion/dipole interaction or a dipole/dipole interaction. The hydrophobic region or moiety of the NGF/p75<sup>NTR</sup> binding inhibitor can interact with a

hydrophobic region of NGF via a hydrophobic interaction. Without being bound by theory, it is believed that compounds having the disclosed structural features can interact with NGF in such a way as to interfere with, and thereby inhibit, the binding of NGF to p75<sup>NTR</sup>.

- 5       The ability of a compound to interact with the amino acid residues of NGF specified above can be determined using a structural model of NGF obtained using a energy-minimization algorithm, as described in published PCT application WO 98/06048, incorporated herein by reference in its entirety. For example, a molecule will interact with the specified residues of NGF, as discussed above, if it
- 10      has at least 3 electronegative atoms (A, B and C) such that at least one of the following two conditions is satisfied: (i) atoms A and B are separated by 5-7 covalent bonds, B and C are separated by 6-8 covalent bonds, and A and C are separated by 10-14 covalent bonds and (ii) distance between A and B is between 4.5 and 7.5 angstroms, and distance between B and C is between 4.5 and 7.5 angstroms.
- 15      See Figure 1. The number of covalent bonds separating atoms can be determined from the structural formula of a molecule. Distance between atoms can be determined experimentally (e.g., by X-ray crystallography or NMR spectroscopy) or evaluated theoretically using any molecular builder (e.g., SYBYL from Tripos Inc. (St. Louis, MO, USA) or QUANTA from Molecular Simulations Inc.(San Diego, CA, USA) as well as any molecular modeling technique (e.g., AMBER from Oxford Molecular Group Inc. /University of California, San Francisco or CHARMM from Molecular Simulations Inc.) or quantum chemical technique (e.g., MNDO from Oxford Molecular Group Inc. (Campbell, CA, USA) /University of Zurich; AMPAC from Semichem (Kansas City, MO, USA); CADPAC from Oxford Molecular Group Inc./Cambridge University; Gaussian-98 from Gaussian Inc. (Carnegie, PA, USA); or GAMESS from Iowa State University). Examples of suitable configurations of groups A, B and C are illustrated in Figure 1, while a representative group of electronegative functional groups is shown in Figure 2.
- 20      Preferred NGF/p75<sup>NTR</sup> inhibitors of the invention comprise a molecular scaffold or framework, to which the electronegative atoms or functional groups are attached, either directly or via an intervening moiety. The scaffold can be, for example, a cyclic or polycyclic moiety, such as a monocyclic, bicyclic or tricyclic

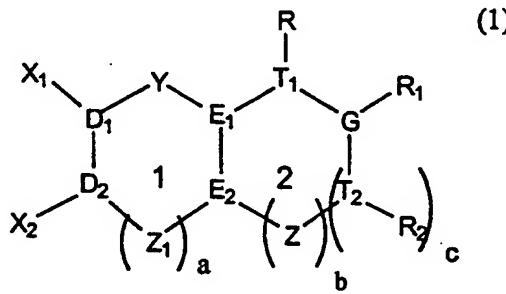

- 25
- 30

moiety, and can include one or more hydrocarbyl or heterocyclic rings. Preferably, the scaffold includes two or more fused, planar, five- or six-membered rings. The molecular scaffold presents the attached electronegative atoms, electronegative functional groups or a combination thereof, in the proper configuration or

5 orientation for interaction with the appropriate residues of NGF. In addition, the molecular scaffold, such as polycyclic system, or a portion thereof, can serve as the hydrophobic group which interacts with hydrophobic residues of NGF, as described above.

In one embodiment, the NGF/p75<sup>NTR</sup> inhibitor is of general Formula 1,

10

In Formula 1, D<sub>1</sub>, D<sub>2</sub>, E<sub>1</sub>, E<sub>2</sub> and G are each, independently, an sp<sup>2</sup>-hybridized carbon or nitrogen atom. One of X<sub>1</sub> and X<sub>2</sub> is a hydrogen atom or absent, while the other is an electronegative atom or an electronegative functional group. R and R<sub>2</sub> are each,

15 independently, an electronegative atom or an electronegative functional group, such as O, S, CH<sub>2</sub>, or NR<sub>3</sub>, where R<sub>3</sub> is H, alkyl, preferably C<sub>1</sub>-C<sub>6</sub>-alkyl, or aryl, such as phenyl. R, R<sub>2</sub> and one of X<sub>1</sub> and X<sub>2</sub> can also each be, independently, an electronegative atom or functional group, such as alkylcarbonyl; alkylthiocarbonyl; alkoxy carbonyl; aminocarbonyl; -OH; -CN; -CO<sub>2</sub>H; -SO<sub>3</sub>H; -SO<sub>2</sub>H; -PO<sub>3</sub>H<sub>2</sub>; -NO<sub>2</sub>;

20 -ONO<sub>2</sub>; -CNO; -SH; -CNS; -OSO<sub>3</sub>H; -OC(O)(OH); halomethyl, dihalomethyl or trihalomethyl group or a fluorine, chlorine, bromine or iodine atom. Y is N, O, S, C-L or N-L, where L is H, alkyl, preferably C<sub>1</sub>-C<sub>6</sub>-alkyl, or an electronegative atom or functional group, such as, but not limited to, alkylcarbonyl; alkylthiocarbonyl; alkoxy carbonyl; aminocarbonyl; -OH; -CN; -CO<sub>2</sub>H; -SO<sub>3</sub>H; -SO<sub>2</sub>H; -PO<sub>3</sub>H<sub>2</sub>; -NO<sub>2</sub>;

25 -ONO<sub>2</sub>; -CNO; -SH; -CNS; -OSO<sub>3</sub>H; -OC(O)(OH); halomethyl, dihalomethyl or trihalomethyl groups or a halogen atom, such as a fluorine, chlorine, bromine or iodine atom. Z and Z<sub>1</sub> are each, independently, O, S, CH, C(O), N, NH, N-alkyl,

N-cycloalkyl and N-P, where P is a carbohydrate moiety, such as a monosaccharide group, for example, a fucosyl, glucosyl, galactosyl,mannosyl, fructosyl, gulosyl, idosyl, talosyl, allosyl, altrosyl, ribosyl, arabinosyl, xylosyl or lyxosyl group. T<sub>1</sub> and T<sub>2</sub> are each, independently, an sp<sup>2</sup>- or sp<sup>3</sup>-hybridized carbon or nitrogen atom. a, b

5 and c are each 0 or 1, provided that at least one of b and c is 1.

R<sub>1</sub> is a monocyclic or polycyclic aryl or heteroaryl, mono- or oligosaccharide, alkyl, cycloalkyl, arylalkyl, alkylamino or alkoxy group which is substituted with at least one substituent selected from the group consisting of electronegative atoms and electronegative functional groups. Preferred

10 monosaccharide groups include fucosyl, glucosyl, galactosyl,mannosyl, fructosyl, gulosyl, idosyl, talosyl, allosyl, altrosyl, ribosyl, arabinosyl, xylosyl and lyxosyl groups. The electronegative substituent can be bonded to the aryl or heteroaryl ring system, alkyl, cycloalkyl, or oligo- or monosaccharide group either directly or indirectly via a bridging group, for example, an alkylene group such as a C<sub>1</sub>-C<sub>4</sub>-

15 alkylene group or an oxaalkylene group. Suitable directly bonded and alkylene bridged electronegative atoms and functional groups include, but are not limited to, alkylcarbonyl; alkylthiocarbonyl; alkoxy carbonyl; aminocarbonyl; -OH; -CN; -CO<sub>2</sub>H; -SO<sub>3</sub>H; -SO<sub>2</sub>H; -PO<sub>3</sub>H<sub>2</sub>; -NO<sub>2</sub>; -ONO<sub>2</sub>; -CNO; -SH; -CNS; -OSO<sub>3</sub>H; -OC(O)(OH); carboxyalkyl, nitroalkyl, N,N-dialkylaminosulfonyl, aminocarbonyl,

20 alkoxy carbonyl, alkoxy carbonylalkyl, cyanocarbonylalkyl, haloalkyl, such as fluoromethyl, difluoromethyl, trifluoromethyl, chloromethyl, dichloromethyl or trichloromethyl; alkyamido or a halogen atom, such as a fluorine, chlorine, bromine or iodine atom. In one embodiment, R<sub>1</sub> is selected from the group consisting of groups including, but not limited to, -(CH<sub>2</sub>)<sub>a</sub>COOH; -(CH<sub>2</sub>)<sub>a</sub>NO<sub>2</sub>; -(CH<sub>2</sub>)<sub>a</sub>OH; -(CH<sub>2</sub>)<sub>a</sub>PO<sub>3</sub>H<sub>2</sub>; -(CH<sub>2</sub>)<sub>a</sub>SO<sub>3</sub>H; -(CH<sub>2</sub>)<sub>a</sub>SO<sub>2</sub>H; -R<sub>4</sub>(CH<sub>2</sub>)<sub>a</sub>COOH; -R<sub>4</sub>(CH<sub>2</sub>)<sub>a</sub>NO<sub>2</sub>; -R<sub>4</sub>(CH<sub>2</sub>)<sub>a</sub>PO<sub>3</sub>H<sub>2</sub>; -R<sub>4</sub>(CH<sub>2</sub>)<sub>a</sub>SO<sub>2</sub>H; -R<sub>4</sub>(CH<sub>2</sub>)<sub>a</sub>SO<sub>3</sub>H; and -R<sub>4</sub>(CH<sub>2</sub>)<sub>a</sub>OH, where a is 1 to 12, preferably 1 to about 4, and R<sub>4</sub> is NH or O.

25

Rings 1 and 2 are each, independently, a five- or six-membered ring and, preferably, are both planar.

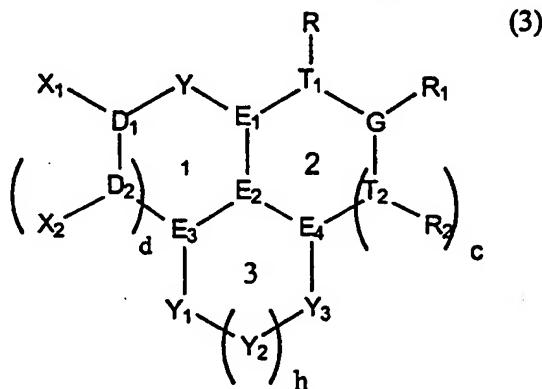

30 It is to be understood that compounds of Formula 1 and Formulas 2, 3 and 5, below, will further include double bonds between adjacent atoms as required to satisfy the valence of each atom. That is, double bonds are added to provide the

following number of total bonds to each of the following types of atoms: carbon: four bonds; nitrogen: 3 bonds; oxygen: two bonds; and sulfur: two bonds.

The term "alkyl", as used herein, refers to a normal, branched or cyclic aliphatic hydrocarbyl group, which can be saturated or partially unsaturated.

5 Preferred alkyl groups are normal, branched and cyclic C<sub>1</sub>-C<sub>8</sub>-alkyl and -alkenyl groups.

In another embodiment, the NGF/p75<sup>NTR</sup> binding inhibitor of Formula 3

10 where D<sub>1</sub>, D<sub>2</sub>, X<sub>1</sub>, X<sub>2</sub>, Y, E<sub>1</sub>, E<sub>2</sub>, T<sub>1</sub>, T<sub>2</sub>, R, G, R<sub>1</sub>, R<sub>2</sub>, and c have the meanings given above for these variables in Formula 1. Y<sub>1</sub>, Y<sub>2</sub>, and Y<sub>3</sub> are independently selected from the identities given for Y in Formula 1. E<sub>3</sub> and E<sub>4</sub> are each, independently, an sp<sup>2</sup>- hybridized carbon or nitrogen atom, and d and h are each, independently, 0 or 1.

15 In one embodiment of the compounds of Formula 3, R<sub>1</sub> is a mono- or polycyclic aryl or heteroaryl, oligo- or monosaccharide group which is substituted with at least one electronegative atom or electronegative group. The mono- or polycyclic aryl or heteroaryl group is preferably substituted with an acid functional group, such as alkyl-CO<sub>2</sub>H; alkyl-SO<sub>3</sub>H; alkyl-SO<sub>2</sub>H; alkyl-PO<sub>3</sub>H<sub>2</sub>; alkyl-OSO<sub>3</sub>H; where the alkyl group is preferably a C<sub>1</sub>-C<sub>4</sub>-alkyl group. In another embodiment, the 20 electronegative atom or electronegative functional group is selected from the group consisting of alkylcarbonyl; alkylthiocarbonyl; alkoxy carbonyl; -CN; -NO<sub>2</sub>; -ONO<sub>2</sub>; -CNO; -SH; -CNS; nitroalkyl, N,N-dialkylaminosulfonyl, aminocarbonyl, alkoxy carbonyl, alkoxy carbonylalkyl, cyanocarbonylalkyl, fluoromethyl, difluoromethyl, trifluoromethyl, chloromethyl, dichloromethyl, trichloromethyl, 25 acetamido and halogen atoms. R<sub>1</sub> can also be an alkylamino, alkyl or alkoxy group

which is substituted with at least one electronegative atom or functional group. For example, in one embodiment, R<sub>1</sub> is selected from the group consisting of

- $(CH_2)_aNO_2$ ; - $(CH_2)_aOH$ ; - $(CH_2)_aPO_3H_2$ ; - $(CH_2)_aSO_3H$ ; - $(CH_2)_aSO_2H$ ; - $O(CH_2)_aCOOH$ ; - $O(CH_2)_aNO_2$ ; - $O(CH_2)_aPO_3H_2$ ; - $O(CH_2)_aSO_2H$ ; - $O(CH_2)_aSO_3H$ ;

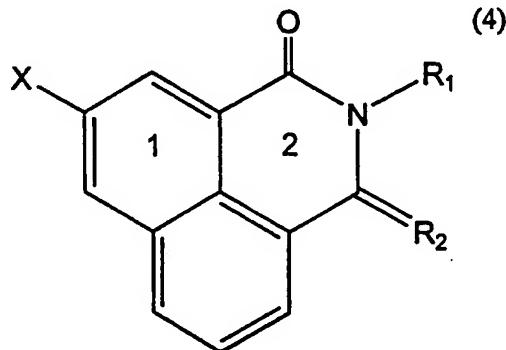

5 - $O(CH_2)_aOH$ ; - $NH(CH_2)_aCOOH$ ; - $NH(CH_2)_aNO_2$ ; - $NH(CH_2)_aPO_3H_2$ ;

- $NH(CH_2)_aSO_2H$ ; and  $NH(CH_2)_aSO_3H$ ; where a is 1 to 12, preferably 1 to about 4.

In another embodiment of the compounds of Formula 3, R<sub>1</sub> is a phenyl group which is substituted by p-toluenesulfonamido or hydroxyl; or R<sub>1</sub> is a - $NH(CH_2)_aOH$  group, where a is 1 to about 4; a carboxyalkyl group, for example, a linear or

10 branched carboxy-C<sub>1</sub>-C<sub>8</sub>-alkyl group; an alkoxy carbonyl group, such as a linear or branched C<sub>1</sub>-C<sub>8</sub>-alkoxy carbonyl group or an alkyl carbonate group, such as a linear or branched C<sub>1</sub>-C<sub>8</sub>-alkyl carbonate group. In this embodiment, ring atom is an sp<sup>2</sup>-hybridized carbon atom, except for G, which is a nitrogen atom; R and R<sub>2</sub> are both O; and d, c and h are each 1.

15 Preferred compounds of Formula 3 are of the formula

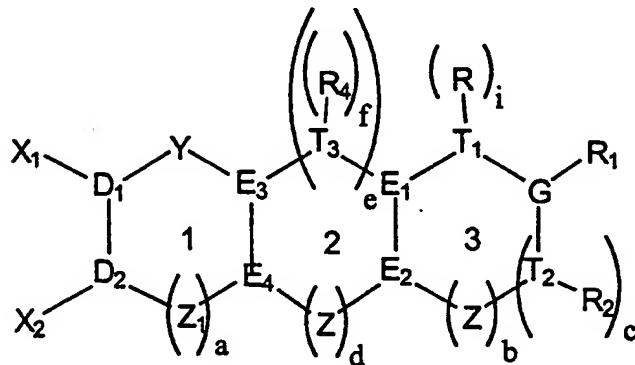

where X and R<sub>1</sub> have the meanings given above for these variables in Formula 1, R<sub>2</sub> is O, CH<sub>2</sub> or NR<sub>3</sub>, where R<sub>3</sub> is H, alkyl, preferably C<sub>1</sub>-C<sub>6</sub>-alkyl, or aryl, and rings 1 and 2 can, optionally, independently be further substituted. Suitable substituents

20 include alkyl groups, preferably normal or branched C<sub>1</sub>-C<sub>6</sub>-alkyl groups and halogen atoms.

In another embodiment, the NGF/p75<sup>NTR</sup> binding inhibitor is of Formula 2,

(2).

In Formula 2, D<sub>1</sub>, D<sub>2</sub>, E<sub>1</sub>, E<sub>2</sub>, E<sub>3</sub>, E<sub>4</sub> and G are each, independently, an sp<sup>2</sup>-hybridized carbon or nitrogen atom. One of X<sub>1</sub> and X<sub>2</sub> is a hydrogen atom or absent, while the  
 5 other is an electronegative atom or an electronegative functional group. R, R<sub>2</sub> and R<sub>4</sub> are each, independently, an electronegative atom or an electronegative functional group, such as O, S, CH<sub>2</sub>, or NR<sub>3</sub>, where R<sub>3</sub> is H, alkyl, preferably C<sub>1</sub>-C<sub>6</sub>-alkyl, or aryl, such as phenyl. R, R<sub>2</sub> and one of X<sub>1</sub> and X<sub>2</sub> can also each be, independently, an electronegative atom or functional group, such as alkylcarbonyl; alkylthiocarbonyl;  
 10 alkoxy carbonyl; aminocarbonyl; -OH; -CN; -CO<sub>2</sub>H; -SO<sub>3</sub>H; -SO<sub>2</sub>H; -PO<sub>3</sub>H<sub>2</sub>; -NO<sub>2</sub>; -ONO<sub>2</sub>; -CNO; -SH; -CNS; -OSO<sub>3</sub>H; -OC(O)(OH); halomethyl, dihalomethyl or trihalomethyl group or a fluorine, chlorine, bromine or iodine atom. Y is N, O, S, C-L or N-L, where L is H, alkyl, preferably C<sub>1</sub>-C<sub>6</sub>-alkyl, or an electronegative atom or functional group, such as, but not limited to, alkylcarbonyl; alkylthiocarbonyl;  
 15 alkoxy carbonyl; aminocarbonyl; -OH; -CN; -CO<sub>2</sub>H; -SO<sub>3</sub>H; -SO<sub>2</sub>H; -PO<sub>3</sub>H<sub>2</sub>; -NO<sub>2</sub>; -ONO<sub>2</sub>; -CNO; -SH; -CNS; -OSO<sub>3</sub>H; -OC(O)(OH); halomethyl, dihalomethyl or trihalomethyl groups or a halogen atom, such as a fluorine, chlorine, bromine or iodine atom. Z and Z<sub>1</sub> are each, independently, O, S, CH, C=O, N, NH, N-alkyl, N-cycloalkyl and N-P, where P is a carbohydrate moiety, such as a monosaccharide  
 20 group, for example, a fucosyl, glucosyl, galactosyl, mannosyl, fructosyl, gulosyl, idosyl, talosyl, allosyl, altrosyl, ribosyl, arabinosyl, xylosyl or lyxosyl group. T<sub>1</sub>, T<sub>2</sub> and T<sub>3</sub> are each, independently, an sp<sup>2</sup>- or sp<sup>3</sup>-hybridized carbon or nitrogen atom. When f is 0, T<sub>3</sub> can further have the meanings given for Z and Z<sub>1</sub>, above. a, b, c, d, e, f and i are each 0 or 1, provided that at least one of b and c is 1; at least one of d  
 25 and e is 1 and at least one of f and i is 1.

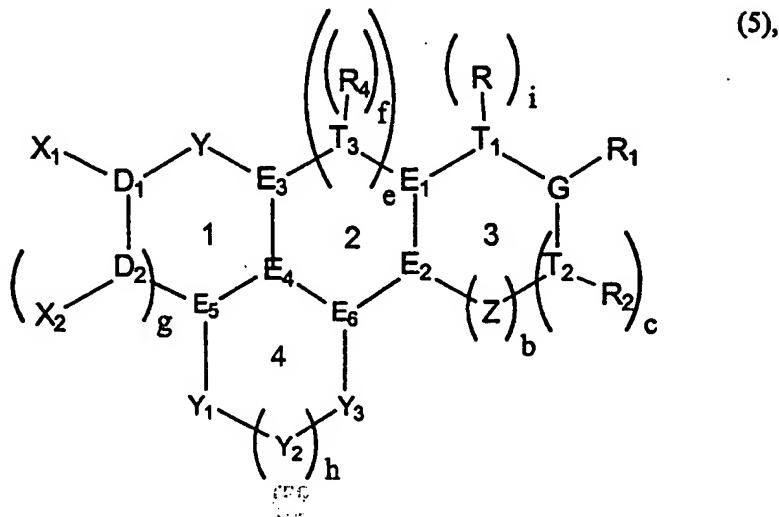

R<sub>1</sub> is a monocyclic or polycyclic aryl or heteroaryl, oligo- or monosaccharide, alkyl, cycloalkyl, arylalkyl alkylamino or alkoxy group which is substituted with at least one substituent selected from the group consisting of electronegative atoms and electronegative functional groups. Preferred

- 5 monosaccharide groups include fucosyl, glucosyl, galactosyl,mannosyl, fructosyl, gulosyl, idosyl, talosyl, allosyl, altrosyl, ribosyl, arabinosyl, xylosyl and lyxosyl groups. The electronegative substituent can be bonded to the aryl or heteroaryl ring system, or monosaccharide group either directly or indirectly via a bridging group, for example, an alkylene group such as a C<sub>1</sub>-C<sub>4</sub>-alkylene group or an oxaalkylene
- 10 group. Suitable directly bonded and alkylene bridged electronegative atoms and functional groups include, but are not limited to, alkylcarbonyl; alkylthiocarbonyl; alkoxy carbonyl; aminocarbonyl; -OH; -CN; -CO<sub>2</sub>H; -SO<sub>3</sub>H; -SO<sub>2</sub>H; -PO<sub>3</sub>H<sub>2</sub>; -NO<sub>2</sub>; -ONO<sub>2</sub>; -CNO; -SH; -CNS; -OSO<sub>3</sub>H; -OC(O)(OH); carboxyalkyl, nitroalkyl, N,N-dialkylaminosulfonyl, aminocarbonyl, alkoxy carbonyl, alkoxy carbonylalkyl,
- 15 cyanocarbonylalkyl, haloalkyl, such as fluoromethyl, difluoromethyl, trifluoromethyl, chloromethyl, dichloromethyl or trichloromethyl; alkyamido or a halogen atom, such as a fluorine, chlorine, bromine or iodine atom. In one embodiment, R<sub>1</sub> is selected from the group consisting of groups including, but not limited to, -(CH<sub>2</sub>)<sub>a</sub>COOH; -(CH<sub>2</sub>)<sub>a</sub>NO<sub>2</sub>; -(CH<sub>2</sub>)<sub>a</sub>OH; -(CH<sub>2</sub>)<sub>a</sub>PO<sub>3</sub>H<sub>2</sub>; -(CH<sub>2</sub>)<sub>a</sub>SO<sub>3</sub>H; -(CH<sub>2</sub>)<sub>a</sub>SO<sub>2</sub>H; -R<sub>4</sub>(CH<sub>2</sub>)<sub>a</sub>COOH; -R<sub>4</sub>(CH<sub>2</sub>)<sub>a</sub>NO<sub>2</sub>; -R<sub>4</sub>(CH<sub>2</sub>)<sub>a</sub>PO<sub>3</sub>H<sub>2</sub>; -R<sub>4</sub>(CH<sub>2</sub>)<sub>a</sub>SO<sub>2</sub>H; -R<sub>4</sub>(CH<sub>2</sub>)<sub>a</sub>SO<sub>3</sub>H; and -R<sub>4</sub>(CH<sub>2</sub>)<sub>a</sub>OH, where a is 1 to 12, preferably 1 to about 4, and R<sub>4</sub> is NH or O.
- 20

Rings 1, 2 and 3 are each, independently, a five- or six-membered ring and, preferably, are each planar.

-18-

In another embodiment, the compound is of Formula 5,

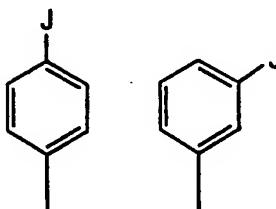

wherein D<sub>1</sub>, D<sub>2</sub>, X<sub>1</sub>, X<sub>2</sub>, E<sub>1</sub>, E<sub>2</sub>, E<sub>3</sub>, T<sub>1</sub>, T<sub>2</sub>, T<sub>3</sub>, Z, G, R, R<sub>1</sub>, R<sub>2</sub>, R<sub>4</sub>, b, c, e, f and i have the meanings given for these variables in Formula 2. Y<sub>1</sub>, Y<sub>2</sub>, and Y<sub>3</sub> are

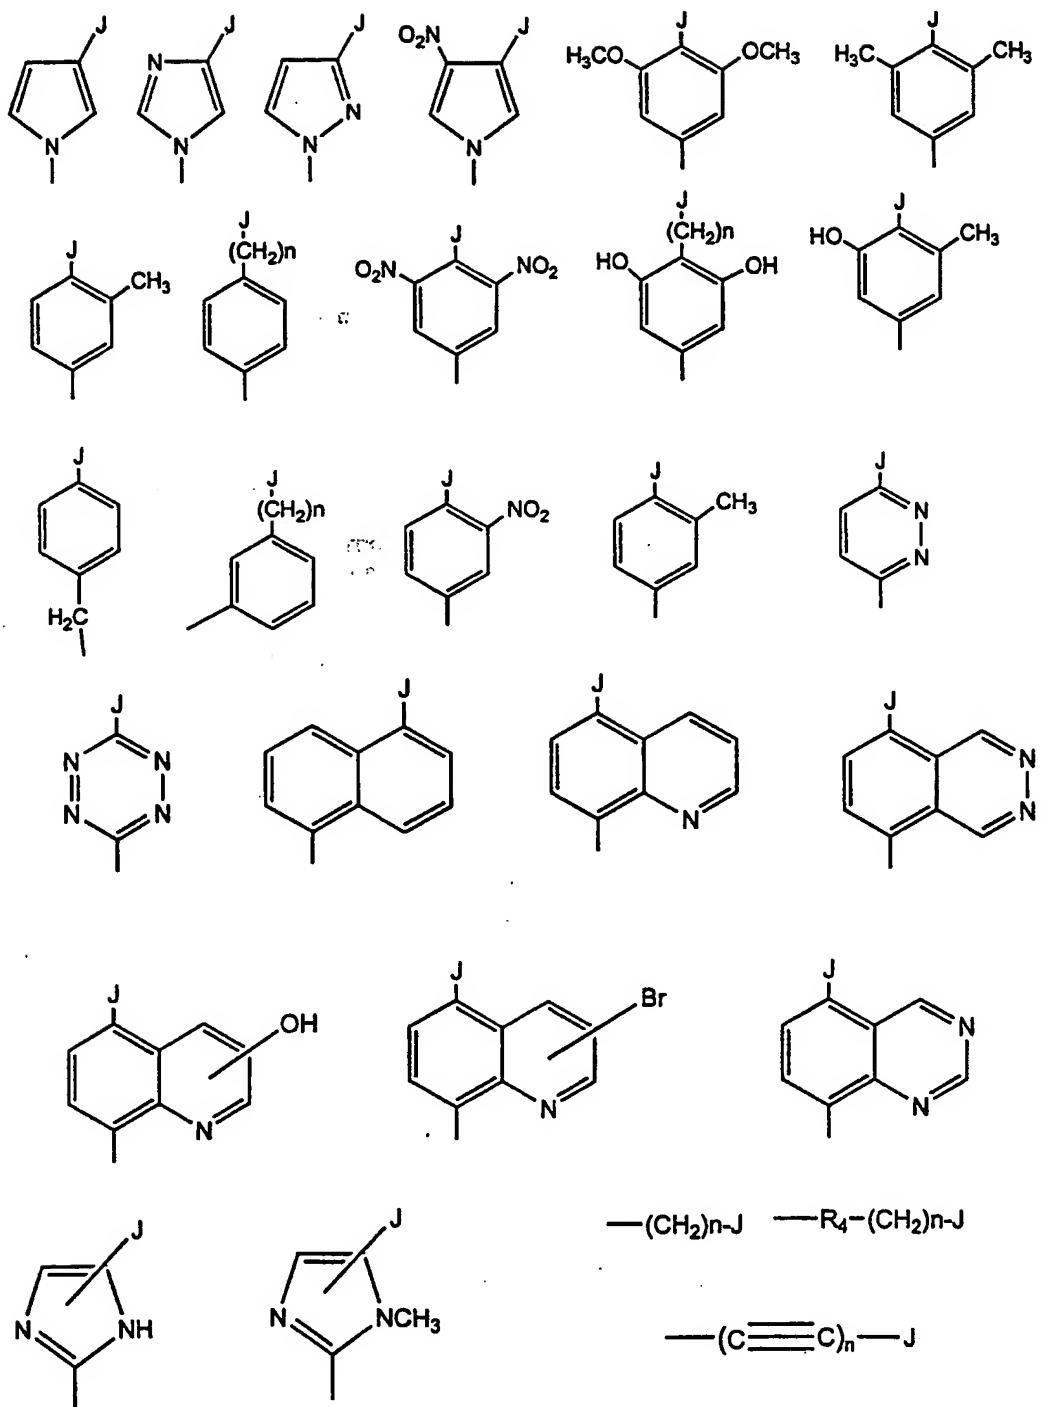

5 independently selected from the identities given for Y in Formula 2, and g and h are each, independently, 0 or 1. E<sub>5</sub> and E<sub>6</sub> are each, independently, an sp<sup>2</sup>- hybridized carbon or nitrogen atom, and g is 0 or 1. Ring 4 can be further unsubstituted or substituted with one or more substituents, such as alkyl or aryl groups.

In one embodiment of the compounds of Formulas 1, 2, 3 and 5, R<sub>1</sub> is

10 selected from the group consisting of substituted phenylene, naphthylene, quinolylene and other substituted aromatic and heteroaromatic groups. R<sub>1</sub> can also be a substituted ethynyl or poly(ethynyl) group. Suitable identities for R<sub>1</sub> include, but are not limited to, the groups shown below.

-19-

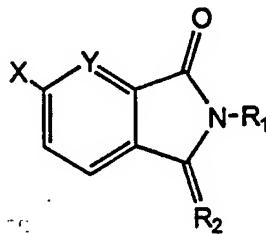

In each of these groups, J can be any of the electronegative atoms or groups described in the definition of R<sub>1</sub> in Formulas 1 and 2. Preferably, J is selected from

5 the group consisting of -OH, -CN, -NO<sub>2</sub>, -CO<sub>2</sub>H, -SO<sub>3</sub>H, -SO<sub>2</sub>H, -F, -Cl, -Br, -I,

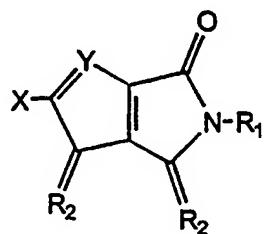

-20-

$\text{-PO}_3\text{H}_2$ ,  $\text{-CF}_3$ ,  $\text{-SO}_2\text{N}(\text{CH}_3)_2$ ,  $\text{-C(O)NH}_2$ ,  $\text{-C(O)CH}_3$ ,  $\text{-C(O)OCH}_3$ ,  $\text{-C(O)CN}$ ,  $\text{-CH}_2\text{F}$ ,  $\text{-CH}_2\text{Cl}$ ,  $\text{-CF}_2\text{H}$ ,  $\text{-CCl}_2\text{H}$ ,  $\text{-CCl}_3$  and  $\text{-NHC(O)CH}_3$ ;  $\text{R}_4$  is NH or O, and n is an integer from 0 to about 6.

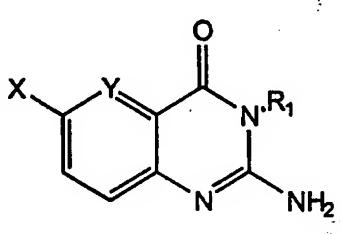

Preferred compounds of Formula 1 are represented by Formulas 6-14, 16-18, 5 21-30 and 32-34, below. Preferred compounds of Formula 3 are represented by Formulas 15, 19, 20 and 31 below.

5 In each of Formulas 6-34, R<sub>1</sub>, X and Y have the meanings given above for these variables in Formula 1. In Formulas 6, and 9-15, Z is selected from the group consisting of O, S, NH, N-alkyl, N-cycloalkyl and N-P, wherein P is a carbohydrate moiety, preferably a monosaccharide moiety, such as a fucosyl, glucosyl, galactosyl, mannosyl, fructosyl, gulosyl, idosyl, talosyl, allosyl, altrosyl, ribosyl, arabinosyl, xylosyl or lyxosyl group. In Formulas 6, 7, 9, 10 and 12-17, R<sub>2</sub> is selected from the group consisting of O, S, CH<sub>2</sub> and NR<sub>3</sub>, wherein R<sub>3</sub> is H, OH, aryl or alkyl.

10 15 xylosyl or lyxosyl group. In Formulas 6, 7, 9, 10 and 12-17, R<sub>2</sub> is selected from the group consisting of O, S, CH<sub>2</sub> and NR<sub>3</sub>, wherein R<sub>3</sub> is H, OH, aryl or alkyl.

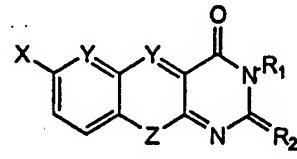

Preferred compounds of Formulas 2 and 5 are of Formulas 35-49 below.

10 In Formulas 32-46, the structural variables X, R<sub>1</sub>, R<sub>2</sub>, Z and Y each have the identities given previously for Formula 2.

In another embodiment, the NGF/p75<sup>NTR</sup> binding inhibitor is of general

formula 50,

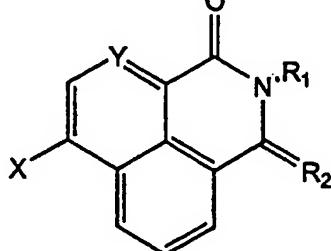

15 In Formula 50, the structural variables D<sub>1</sub>, D<sub>2</sub>, X<sub>1</sub>, X<sub>2</sub>, E<sub>1</sub>, E<sub>2</sub>, E<sub>3</sub>, T<sub>1</sub>, T<sub>2</sub>, T<sub>3</sub>, Z, G, R, R<sub>1</sub>, R<sub>2</sub>, R<sub>4</sub>, b, and c have the meanings given for these variables in Formula 2. T<sub>3</sub> is

-24-

an  $sp^2$ - or  $sp^3$ -hybridized carbon or nitrogen atom, and is preferably an  $sp^2$ -hybridized carbon or nitrogen atom.

A preferred subset of compounds of Formula 3 is represented by Formula 51,

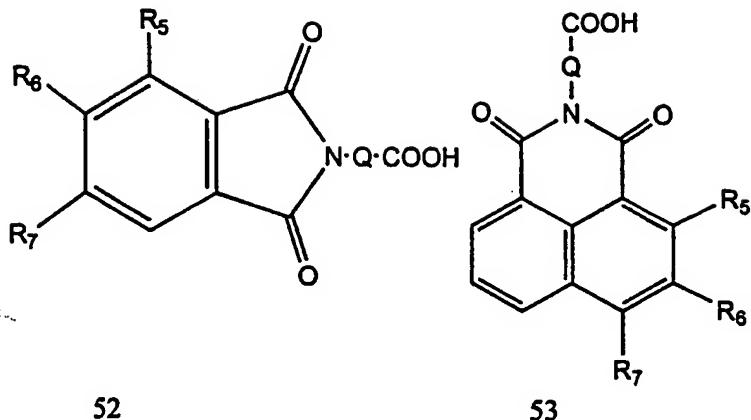

(51).

5 In Formula 51, X, Y and R<sub>1</sub> each have the meanings given for these variables in Formula 1. R<sub>2</sub> is O, S, CH<sub>2</sub> or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl, preferably normal or branched C<sub>1</sub>-C<sub>6</sub>-alkyl, or aryl, such as phenyl or substituted phenyl.

In a preferred embodiment, the NGF/p75<sup>NTR</sup> inhibitor exhibits greater NGF/p75<sup>NTR</sup> binding inhibition in cells which express p75<sup>NTR</sup> but not trkA than in 10 cells which express both p75<sup>NTR</sup> and trkA. The binding of NGF to p75<sup>NTR</sup> in cells which do not express trkA can, under certain conditions, mediate apoptotic cell death. The p75<sup>NTR</sup> receptor has a greater affinity for NGF in this proapoptotic state, that is, in cells which do not express trkA. Compounds which exhibit greater NGF/p75<sup>NTR</sup> binding inhibition in the absence of trkA advantageously selectively 15 inhibit or interfere with processes such as apoptotic cell death, while having a smaller effect on other p75<sup>NTR</sup>-mediated processes.

Preferred compounds which selectively inhibit the binding of NGF to p75<sup>NTR</sup> in cells which do not express trkA include compounds of Formulas 52 and 53, below.

In Formulas 52 and 53, Q is selected from the group consisting of C<sub>1</sub>-C<sub>5</sub>-alkylene; para- and meta-phenylene; cycloalkylene, carbohydrate and para- and meta-  
 5 -CH<sub>2</sub>C<sub>6</sub>H<sub>4</sub>-.

In Formulas 51 and 52, R<sub>5</sub>, R<sub>6</sub> and R<sub>7</sub> are, preferably, each, independently, H, -COOH or -NO<sub>2</sub>. More preferably, two of R<sub>5</sub>, R<sub>6</sub> and R<sub>7</sub> are H and the other is -COOH or -NO<sub>2</sub>.

The present invention also relates to a method of inhibiting the binding of NGF to p75<sup>NTR</sup>. The method comprises contacting NGF in the presence of p75<sup>NTR</sup> with an NGF/p75<sup>NTR</sup> binding inhibitory amount of a NGF/p75<sup>NTR</sup> inhibitor compound, thereby inhibiting binding of NGF to p75<sup>NTR</sup>. The method can be practiced *in vitro*, for example, in a cell culture screening assay to screen compounds which potentially bind, activate or inhibit receptor function.. In such a method, the inhibitor compound can function by binding and eliminating any competing function of NGF in the sample or culture. The inhibitor compounds can also be used to control NGF activity in neuronal cell culture. The method can also be practised *in vivo*, for example, to inhibit one or more processes mediated by binding of NGF to p75<sup>NTR</sup>.

In another embodiment, the invention provides a method of treating a condition mediated by NGF/p75<sup>NTR</sup> binding in a patient. The method comprises the step of administering to the patient a therapeutically effective amount of a NGF/p75<sup>NTR</sup> binding inhibitor, such as any of the inhibitors described above. The condition to be treated can be any condition which is mediated, at least in part, by binding of NGF to the p75<sup>NTR</sup> receptor. Such conditions include, but are not limited

to, Alzheimer's disease, epilepsy, pain, multiple sclerosis, amyotrophic lateral sclerosis, stroke and cerebral ischemia.

Preferably, the NGF/p75<sup>NTR</sup> binding inhibitor to be administered selectively inhibits the binding of NGF to p75<sup>NTR</sup> in cells which do not express trkA. In this 5 embodiment, the condition is mediated, at least in part, by the binding of NGF to the p75<sup>NTR</sup> receptor in cells which do not express the trkA receptor. Generally, such conditions are mediated by NGF-induced apoptotic cell death.

The quantity of a given compound to be administered will be determined on an individual basis and will be determined, at least in part, by consideration of the 10 individual's size, the severity of symptoms to be treated and the result sought. The NGF/p75<sup>NTR</sup> binding inhibitor can be administered alone or in a pharmaceutical composition comprising the inhibitor, an acceptable carrier or diluent and, optionally, one or more additional drugs.

The NGF/p75<sup>NTR</sup> binding inhibitor can be administered subcutaneously, 15 intravenously, parenterally, intraperitoneally, intradermally, intramuscularly, topically, enteral (e.g., orally), rectally, nasally, buccally, sublingually, vaginally, by inhalation spray, by drug pump or via an implanted reservoir in dosage formulations containing conventional non-toxic, physiologically acceptable carriers or vehicles. The preferred method of administration is by oral delivery. The form in which it is 20 administered (e.g., syrup, elixir, capsule, tablet, solution, foams, emulsion, gel, sol) will depend in part on the route by which it is administered. For example, for mucosal (e.g., oral mucosa, rectal, intestinal mucosa, bronchial mucosa) administration, nose drops, aerosols, inhalants, nebulizers, eye drops or suppositories can be used. The compounds and agents of this invention can be 25 administered together with other biologically active agents, such as analgesics, anti-inflammatory agents, anesthetics and other agents which can control one or more symptoms or causes of a p75<sup>NTR</sup>-mediated condition.

In a specific embodiment, it may be desirable to administer the agents of the invention locally to a localized area in need of treatment; this may be achieved by, 30 for example, and not by way of limitation, local infusion during surgery, topical application, transdermal patches, by injection, by means of a catheter, by means of a suppository, or by means of an implant, said implant being of a porous, non-porous,

or gelatinous material, including membranes, such as sialastic membranes or fibers. For example, the agent can be injected into the joints.

The compound of the invention can, optionally, be administered in combination with one or more additional drugs which, for example, are known for

5 treating and/or alleviating symptoms of the condition mediated by p75<sup>NTR</sup>. The additional drug can be administered simultaneously with the compound of the invention, or sequentially.

The present invention also provides pharmaceutical compositions. Such compositions comprise a therapeutically (or prophylactically) effective amount of

10 one or more NGF/p75<sup>NTR</sup> binding inhibitors, preferably one or more compounds of Formulas 1, 2, 4 or 5, as described above, and a pharmaceutically acceptable carrier or excipient. Suitable pharmaceutically acceptable carriers include, but are not limited to, saline, buffered saline, dextrose, water, glycerol, ethanol, and combinations thereof. The carrier and composition can be sterile. The formulation

15 should suit the mode of administration.

Suitable pharmaceutically acceptable carriers include but are not limited to water, salt solutions (e.g., NaCl), alcohols, gum arabic, vegetable oils, benzyl alcohols, polyethylene glycols, gelatin, carbohydrates such as lactose, amylose or starch, cyclodextrin, magnesium stearate, talc, silicic acid, viscous paraffin, perfume

20 oil, fatty acid esters, hydroxymethylcellulose, polyvinyl pyrrolidone, etc. The pharmaceutical preparations can be sterilized and if desired, mixed with auxiliary agents, e.g., lubricants, preservatives, stabilizers, wetting agents, emulsifiers, salts for influencing osmotic pressure, buffers, coloring, flavoring and/or aromatic substances and the like which do not deleteriously react with the active compounds.

25 The composition, if desired, can also contain minor amounts of wetting or emulsifying agents, or pH buffering agents. The composition can be a liquid solution, suspension, emulsion, tablet, pill, capsule, sustained release formulation, or powder. The composition can be formulated as a suppository, with traditional binders and carriers such as triglycerides. Oral formulation can include standard

30 carriers such as pharmaceutical grades of mannitol, lactose, starch, magnesium stearate, polyvinyl pyrrolidone, sodium saccharine, cellulose, magnesium carbonate, etc.

The composition can be formulated in accordance with the routine procedures as a pharmaceutical composition adapted for intravenous administration to human beings. Typically, compositions for intravenous administration are solutions in sterile isotonic aqueous buffer. Where necessary, the composition may 5 also include a solubilizing agent and a local anesthetic to ease pain at the site of the injection. Generally, the ingredients are supplied either separately or mixed together in unit dosage form, for example, as a dry lyophilized powder or water free concentrate in a hermetically sealed container such as an ampule or sachet indicating the quantity of active agent. Where the composition is to be administered by 10 infusion, it can be dispensed with an infusion bottle containing sterile pharmaceutical grade water, saline or dextrose/water. Where the composition is administered by injection, an ampule of sterile water for injection or saline can be provided so that the ingredients may be mixed prior to administration.

The pharmaceutical compositions of the invention can also include an agent 15 which controls release of the NGF/p75<sup>NTR</sup> inhibitor compound, thereby providing a timed or sustained release composition.

The present invention also relates to prodrugs of the NGF/p75<sup>NTR</sup> binding inhibitors disclosed herein, as well as pharmaceutical compositions comprising such prodrugs. For example, compounds of the invention which include acid functional 20 groups or hydroxyl groups can also be prepared and administered as a corresponding ester with a suitable alcohol or acid. The ester can then be cleaved by endogenous enzymes within the patient to produce the active agent.

In a further embodiment, the invention relates to the use of an NGF/p75<sup>NTR</sup> binding inhibitor, such as any of the compounds described above, for treating a 25 condition mediated by binding of NGF to p75<sup>NTR</sup>. The invention further relates to the use of these compounds for the manufacture of a medicament for treating a condition mediated by binding of NGF to p75<sup>NTR</sup>.

Representative syntheses of compounds of the invention are set forth in the following examples. Other synthetic pathways that can be used to prepare certain 30 compounds of the invention are illustrated in Figures 3 and 4.

## EXAMPLES

**Example 1      Synthesis of NGF/p75<sup>NTR</sup> inhibitors****General methods**

Reagents and solvents were obtained from commercial sources (Sigma, Aldrich, BDH). THF was dried by refluxing with benzophenone and potassium and 5 subsequently distilled. All other solvents were utilized as they were received.

Thin layer chromatography (TLC) solvent systems used are given in Table 1. These were developed by ascending TLC on precoated aluminum backed sheets of silica gel 60 F254 (Merck). TLC plates were developed using ultra-violet light, iodine crystal and/or ninhydrin.

10 Melting points (mp) were determined on a Thomas Hoover Unimelt melting point apparatus and are uncorrected.

NMR spectra of final compounds were determined on an AVANCE 300 MHz NMR spectrometer. All NMR samples were prepared in DMSO-d<sub>6</sub> unless otherwise indicated. Chemical shifts are reported as  $\delta$  parts per million using 15 DMSO as an internal reference. Mass spectrometric (MS) analyses are performed on a Varian Instrument VG Quattro multiple quadripole spectrometer using electrospray ionization (ESI). The spectra were all obtained in the negative ion mode. IR spectra were recorded on a Bomen MB-120 FT-IR spectrophotometer.

Abbreviations used herein are: HOAc, glacial acetic acid; THF, 20 tetrahydrofuran; DMSO-d<sub>6</sub>, deuterated dimethylsulfoxide; CHCl<sub>3</sub>, chloroform; MeCN, acetonitrile; H<sub>2</sub>O, distilled water; MeOH, methanol; EtOH, ethanol; TEA, triethylamine; EtOAc, ethyl acetate.

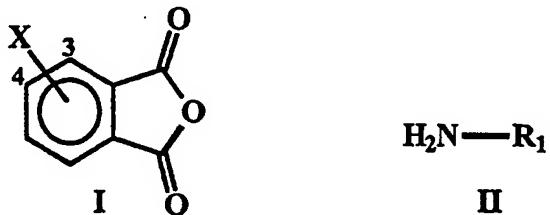

-30-

Table 1: List of Solvent Systems.

Solvent Code	Solvent System	Solvent Ratio
5	A	MeOH:HOAc
	B	MeCN:H <sub>2</sub> O:MeOH
	C	MeCN:H <sub>2</sub> O:MeOH
	D	CHCl <sub>3</sub> :MeOH:HOAc
	E	EtOH:HOAc

## General Synthesis of Phthalimide derivatives

Method A: The phthalimide series of compounds was prepared through the condensation of stoichiometric amounts of phthalic anhydride or a phthalic anhydride derivative (I) with an appropriate primary amine (II). The combined reagents were dissolved in glacial acetic acid, placed under a N<sub>2</sub> atmosphere and refluxed. The progress of the reaction was monitored by TLC. Final clear solutions were concentrated *in vacuo* and the resulting crude material was either reprecipitated from 1,4-dioxane/1N HCl or HOAc/H<sub>2</sub>O and/or recrystallized from 95% ethanol, THF or 1,4-dioxane. In the instances where the final product precipitated out of the reaction solution, the completed reaction mixture was cooled to room temperature, the solid collected by filtration and washed with distilled water. This precipitate was reprecipitated with 1,4-dioxane/ 1N HCl or HOAc/H<sub>2</sub>O and/or recrystallized from 95% ethanol, THF or 1,4-dioxane.

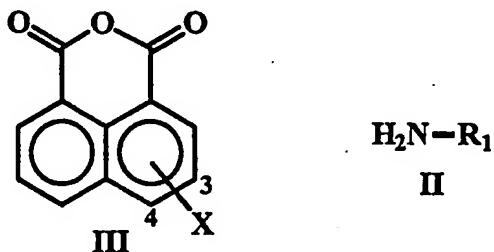

where X and R<sub>1</sub> are as previously defined.

Method B: Reaction conditions and purification procedures were similar to those of method A. However, instead of stoichiometric amounts of reagents, the anhydride (I) and the primary amine(II) were combined in a 1:2 ratio with the optional addition of 1 equivalent of anhydrous sodium acetate. During the course of preparing the various phthalimide derivatives, these reaction conditions were found to lead to increased product yields.

## General Synthesis of Naphthalimide derivatives

Method A: 1,8-naphthalic anhydride or its derivative (III) was reacted with an appropriate primary amine (II) under conditions similar to those of method A for 10 the phthalimide series. Glacial acetic acid, dry THF, dry 1,4-dioxane or DMSO were used as solvents. Purification also included fractional recrystallisation.

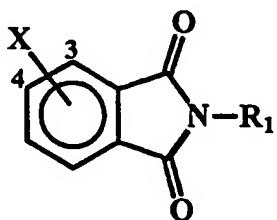

**Method B:** As per method B for the phthalimide series. Glacial acetic acid was the only solvent used under these conditions.

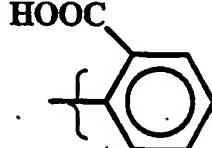

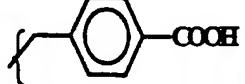

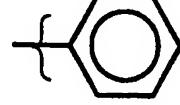

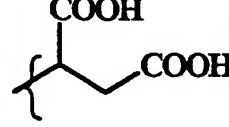

## 15 General Synthesis of Amino Phthalimide or Amino Naphthalimide Derivatives

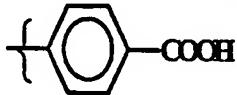

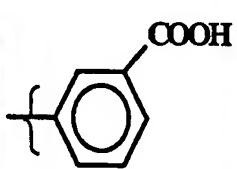

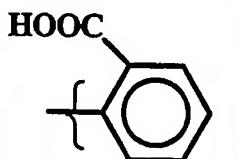

The amino-N-substituted phthalimides and amino-N-substituted naphthalimides were synthesized *via* the reduction of the corresponding nitro-N-substituted phthalimides or nitro-N-substituted naphthalimides with 10% palladium on activated charcoal in glacial acetic acid or glacial acetic acid/1,4-dioxane under a hydrogen atmosphere. Upon completion, as indicated by TLC, the catalyst was removed by filtering through a celite pad and the clear filtrate concentrated. The crude material was purified using procedures similar to those described above.

5 Synthesis of Phthalimide Derivatives:

Method A:

4-carboxy-N-(carboxymethyl)phthalimide (100)

4-carboxyphthalic anhydride (benzene tricarboxylic acid anhydride) (1.0 g, 0.0052 mol), glycine (0.3907 g, 0.0052 mol) and 50-60 mls of glacial acetic acid were added to a 100 ml round-bottom flask equipped with a reflux condenser, heating mantle and stir plate. The system was placed under a N<sub>2</sub> atmosphere and heated to a gentle reflux. The progress of the reaction was monitored by TLC. After 7 hours the clear colourless solution was cooled to room temperature. The resulting white precipitate was filtered through a Buchner funnel and washed three times with 10 mls of distilled water. This crude material was recrystallized in EtOH/H<sub>2</sub>O to

afford the desired product as a powdery white solid. The filtrate was evaporated under vacuum using a rotary evaporator. The crude material was recrystallized from EtOH/H<sub>2</sub>O to yield a second batch of white powdery product. Individual batches were dried in air for 24 hours and then *in vacuo* for 48-72 hours to afford 100 in a 5 combined yield of 1.02 g (78%): mp=262-265°C; R<sub>f</sub> 0.70 (A): R<sub>f</sub> 0.47 (B): R<sub>f</sub> 0.20 (D): <sup>1</sup>H NMR (DMSO-*d*<sub>6</sub>) δ 4.33 (s, 2H), 8.02 (d, J= 7.8 Hz, 1H), 8.24 (bs, 1H), 8.36 (d, J=7.8 Hz, 1H); MS *m/z* (rel intensity) 249 (13), 248 (100), 204 (36); IR (cm<sup>-1</sup>): 2750-3300 (OH), 3052 (C=CH), 2671 (C-H), 1776 (C=O), 1731 (C=O), 1705 (C=O), 1620 (C=C), 1420 (C=C), 1300 (C-O), 1122 (C-O), 746 (C=CH).

10 4-carboxy-N-(2-carboxyethyl)phthalimide (101)

4-carboxyphthalic anhydride (1.0 g, 0.0052 mol) and β-alanine (0.46, 0.0052 mol) were refluxed as above for 7 hours. Crystallisation of the product from EtOH yielded 1.37 g (78%) of 101 as a white solid: mp=240-242°C; R<sub>f</sub> 0.77 (A): R<sub>f</sub> 0.67 (B): R<sub>f</sub> 0.33 (D): <sup>1</sup>H NMR (DMSO-*d*<sub>6</sub>); MS *m/z* (rel intensity) 263 (14), 262 (100); 15 IR (cm<sup>-1</sup>): 2800-3250 (OH), 3150 (C=CH), 2671 (C-H), 1777 (C=O), 1725 (C=O), 1705 (C=O), 1620 (C=C), 1452 (C=C), 1385(C-O), 1226 (C-O), 731 (C=CH). MS *m/z* (rel intensity) 263 (14), 262 (100).

4-carboxy-N-(3-carboxypropyl)phthalimide (102)

4-carboxyphthalic anhydride (1.0 g, 0.0052 mol) and 4-aminobutyric acid 20 (0.54 g, 0.0052 mol) were refluxed as above for 7 hours. Crystallisation of the product from EtOH yielded 1.1 g (76%) of 102 as a white solid: mp=218-220°C; R<sub>f</sub> 0.78 (A): R<sub>f</sub> 0.84 (C): R<sub>f</sub> 0.28 (D): <sup>1</sup>H NMR (DMSO-*d*<sub>6</sub>); IR (cm<sup>-1</sup>): 2800-3250 (OH), 3050 (C=CH), 2680 (C-H), 1760 (C=O), 1712 (bs, C=O), 1560 (C=C), 1430 (C=C), 1397 (C-O), 1305 (C-O), 727 (C=CH); MS *m/z* (rel intensity) 277 (18), 276 25 (100).

4-carboxy-N-(4-carboxybutyl)phthalimide (103)

4-carboxyphthalic anhydride (1.0 g, 0.0052 mol) and 5-aminopentanoic acid (0.61 g, 0.0052 mol) were refluxed as above overnight. Crystallisation of the product from EtOH yielded 1.51 g (72%) of 103 as a white solid: mp=223°C; R<sub>f</sub>

0.79 (A):  $R_f$  0.92 (C):  $R_f$  0.36 (D): IR ( $\text{cm}^{-1}$ ): 2750-3375 (OH), 3084 (C=CH), 2665 (C-H), 1767 (C=O), 1705 (bs, C=O), 1620 (C=C), 1486 (C=C), 1402 (CH<sub>2</sub>), 1382 (C-O), 1302 (C-O), 732 (C=CH); MS  $m/z$  (rel intensity) 291 (15), 290 (100).

4-carboxy-N-(5-carboxypentyl)phthalimide (104)

5 4-carboxyphthalic anhydride (1.0 g, 0.0052 mol) and 6-aminohexanoic acid (0.68 g, 0.0052 mol) were refluxed as above overnight. Crystallisation of the product from EtOH yielded 1.35 g (85%) of 104 as a white solid: mp=202-204°C;  $R_f$  0.80 (A):  $R_f$  0.84 (B):  $R_f$  0.47 (D): IR ( $\text{cm}^{-1}$ ): 2800-3250 (OH), 3103 (C=CH), 2675 (C-H), 1769 (C=O), 1709 (bs, C=O), 1625 (C=C), 1485 (C=C), 1403(C-O), 1303 (C-O), 730 (C=CH); MS  $m/z$  (rel intensity) 305 (16), 304 (100).

4-carboxy-N-(*p*-carboxyphenyl)phthalimide (105)

4-carboxyphthalic anhydride (1.0 g, 0.0052 mol) and *p*-aminobenzoic acid (0.714 g, 0.0052 mol) were refluxed as above overnight. A clean product from the mother liquor fraction was not obtained. Crystallisation of the precipitated product 15 from MeOH/H<sub>2</sub>O yielded 0.88 g (55%) of 105 as a white solid: mp=377-379°C;  $R_f$  0.90 (A):  $R_f$  0.76 (B):  $R_f$  0.46 (D): IR ( $\text{cm}^{-1}$ ): 2750-3200 (OH), 3077 (C=CH), 2652 (C-H), 1777 (C=O), 1731 (C=O), 1699 (C=O), 1604 (C=C), 1512 (C=C), 1485 (C=C), 1428 (C=C), 1376 (C-O), 1310 (C-O), 1092 (C-O), 723 (C=CH); MS  $m/z$  (rel intensity) 311 (23), 310 (100).

20 4-carboxy-N-(*m*-carboxyphenyl)phthalimide (106)

4-carboxyphthalic anhydride (1.0 g, 0.0052 mol) and *m*-aminobenzoic acid (0.714 g, 0.0052 mol) were refluxed as above overnight. Crystallisation of the product from MeOH yielded 1.21 g (72%) of 106 as a white solid: mp= >380°C;  $R_f$  0.87 (A):  $R_f$  0.75 (C):  $R_f$  0.27 (D): IR ( $\text{cm}^{-1}$ ): 2700-3125 (OH), 3090 (C=CH), 2665 (C-H), 1780 (C=O), 1731 (C=O), 1699 (C=O), 1610 (C=C), 1589 (C=C), 1484 (C=C), 1452 (C=C), 1383 (C-O), 1310 (C-O), 1222 (C-O), 722 (C=CH); MS  $m/z$  (rel intensity) 311 (22), 310 (100).

**4-carboxy-N-(*o*-carboxyphenyl)phthalimide (107)**

4-carboxyphthalic anhydride (1.0 g, 0.0052 mol) and *m*-aminobenzoic acid (0.714 g, 0.0052 mol) were refluxed as above for 24 hours. Crystallisation of the product from HOAc/H<sub>2</sub>O yielded 0.96 g (59%) of 107 as a white solid: mp=262-

5 264°C; R<sub>f</sub> 0.81 (A): R<sub>f</sub> 0.77 (B): R<sub>f</sub> 0.28 (D): <sup>1</sup>H NMR (DMSO-*d*<sub>6</sub>) δ 7.55 (dd, J=7.8, 1.3 Hz, 1H), 7.64 (ddd, J=7.8, 7.8, 1.3 Hz, 1H), 7.78 (ddd, J=7.8, 7.8, 1.4 Hz), 8.06 (dd, J=7.8, 1.4 Hz, 1H), 8.09 (dd, J=7.7, 0.6 Hz, 1H), 8.32 (dd, J=7.7, 1.3 Hz, 1H), 8.117 (dd, J=1.3, 0.6 Hz, 1H); IR (cm<sup>-1</sup>): 2800-3100 (OH), 3064 (C=CH), 2646 (C-H), 1779 (C=O), 1716 (bs, C=O), 1602 (C=C), 1493 (C=C), 1462 (C=C), 1385 (C-O), 1261 (C-O), 1217 (C-O), 722 (C=CH); MS m/z (rel intensity) 311 (20), 310 (100).

**4-carboxy-N-(*p*-carboxyphenyl methyl)phthalimide (108)**

4-carboxyphthalic anhydride (0.5 g, 0.0026 mol) and 4-(aminomethyl)benzoic acid (0.39 g, 0.0026 mol) were refluxed as above overnight.

15 Crystallisation of the product from 1,4-dioxane/H<sub>2</sub>O yielded 0.67 g (79%) of 108 as a white solid: mp=365-366°C; R<sub>f</sub> 0.76 (A): R<sub>f</sub> 0.71 (C): R<sub>f</sub> 0.50 (D): IR (cm<sup>-1</sup>): 2800-3100 (OH), 3071 (C=CH), 2678 (C-H), 1782 (C=O), 1712 (bs, C=O), 1611 (C=C), 1577 (C=C), 1428 (C=C), 1391 (C-O), 1300 (C-O), 1105 (C-O), 734 (C=CH); MS m/z (rel intensity) 325 (20), 324 (100).

**20 4-carboxy-N-aspartylphthalimide (111)**

4-carboxyphthalic anhydride (0.5 g, 0.0026 mol) and L-aspartic acid (0.346 g, 0.0026 mol) were refluxed as above for 5 days. The clear colourless solution was concentrated under vacuum. The crude material was dissolved in EtOAc and extracted with water (3 X 25 ml). The EtOAc layer was dried over magnesium sulfate, concentrated under vacuum with a rotary evaporator and recrystallized in EtOAc/hexanes. The product was dried in air for 24 hours and then *in vacuo* for 48-72 hours to afford 0.15 g (19%) 111 as a powdery white solid: mp= 242-243 °C; R<sub>f</sub> 0.76 (A): R<sub>f</sub> 0.52 (B): R<sub>f</sub> (D): IR (cm<sup>-1</sup>): 2750-3250 (OH), 3090 (C=CH), 2639 (C-H), 1783 (C=O), 1736 (bs, C=O), 1628 (C=C), 1485 (C=C), 1389 (bs, C-O), 1298

(C-O), 1196 (C-O), 729 (C=CH); MS *m/z* (rel intensity) 307 (156), 306 (100), 262 (29), 218 (49).

3-nitro-N-(1-carboxymethyl)phthalimide (120)

3-nitrophthalic anhydride (0.5 g, 0.0026 mol) and glycine (0.19 g, 0.0026 mol) were refluxed as above overnight. The clear solution was concentrated under vacuum with a rotary evaporator and the crude material triturated with hot 1,4-dioxane. Undissolved material was filtered through a Buchner funnel and washed twice with 1 ml hot 1,4-dioxane. The filtrate was diluted with water. A white solid appeared which was filtered through a Buchner and washed three times with 3-5 ml water. The product was dried in air for a short time and then *in vacuo* for 48-72 hours to afford 0.52 g (81%) 120 as off white crystals: mp=200-202°C; R<sub>f</sub> 0.73 (A): R<sub>f</sub> 0.77 (C): R<sub>f</sub> 0.23 (D): IR (cm<sup>-1</sup>): 2800-3200 (OH), 3096 (C=CH), 2652 (C-H), 1779 (C=O), 1724 (C=O), 1690 (C=O), 1648 (C=C), 1544 (N=O), 1470 (C=C), 1448 (C=C), 1412 (C-O), 1368 (N=O), 1260 (C-O), 722 (C=CH); MS *m/z* (rel intensity) 250 (15), 249 (100), 205 (89).

3-nitro-N-(2-carboxyethyl)phthalimide (121)

3-nitrophthalic anhydride (0.5 g, 0.0026 mol) and  $\beta$ -alanine (0.23 g, 0.0026 mol) were refluxed as above overnight. The clear solution was purified as per 120 to yield 0.55 g (80 %) 121 as a pale yellow powder: mp=146-148°C; R<sub>f</sub> 0.73 (A): R<sub>f</sub> 0.87 (C): R<sub>f</sub> 0.57 (D): <sup>1</sup>H NMR (DMSO-*d*<sub>6</sub>)  $\delta$  2.60 (t, *J*=7.4 Hz, 2H), 3.78 (t, *J*=7.4 Hz, 2H), 8.07 (dd, *J*=7.5, 8.0 Hz, 1H), 8.16 (d, *J*=7.5 Hz, 1H), 8.27 (d, *J*=8.0, 1H); IR (cm<sup>-1</sup>): 2800-3200 (OH), 3097 (C=CH), 2620 (C-H), 1781 (C=O), 1725 (bs, C=O), 1617 (C=C), 1545 (N=O), 1468 (C=C), 1450 (C=C), 1395 (C-O), 1360 (N=O), 1235 (C-O), 723 (C=CH); MS *m/z* (rel intensity) 264 (76), 263 (100), 191 (90).

3-nitro-N-(3-carboxypropyl)phthalimide (122)

3-nitrophthalic anhydride (0.5 g, 0.0026 mol) and 4-aminobutyric acid (0.268 g, 0.0026 mol) were refluxed as above overnight. The clear solution was purified as per 120 to yield 0.57 g (79 %) 122 as a very pale orange powder:

mp=144-146°C; R<sub>f</sub> 0.62 (A): R<sub>f</sub> 0.87 (C): R<sub>f</sub> 0.78 (D): IR (cm<sup>-1</sup>): 3000-3250 (OH), 3219 (C=CH), 2953 (C-H), 1778 (C=O), 1716 (C=O), 1667 (C=O), 1615 (C=C), 1548 (N=O), 1442 (C=C), 1395 (C-O), 1355 (N=O), 1189 (C-O), 723 (C=CH); MS m/z (rel intensity) 313 (100), 278 (65), 277 (42), 191 (71).

5 3-nitro-N-(4-carboxybutyl)phthalimide (123)

3-nitrophthalic anhydride (0.5 g, 0.0026 mol) and 5-aminopentanoic acid (0.30 g, 0.0026 mol) were refluxed as above overnight. The clear solution was purified as per 120 to yield 0.55 g (73 %) 123 as pale yellow flat crystals: mp=158-160°C; R<sub>f</sub> 0.69 (A): R<sub>f</sub> 0.90 (C): R<sub>f</sub> 0.73 (D): <sup>1</sup>H NMR (DMSO-d<sub>6</sub>) δ 1.53 (m, 2H), 1.58 (m, 2H), 2.24 (t, J=7.1 Hz, 2H), 3.57 (t, J=6.7 Hz, 2H), 8.04 (dd, J=8.0, 7.5 Hz, 1H), 8.16 (d, J=7.5 Hz, 1H), 8.27 (d, J=8.0 Hz, 1H); IR (cm<sup>-1</sup>): 2800-3130 (OH), 3096 (C=CH), 2691 (C-H), 1774 (C=O), 1723 (bs, C=O), 1616 (C=C), 1543 (N=O), 1466 (C=C), 1443 (C=C), 1396 (C-O), 1358 (N=O), 1209 (C-O), 1050 (C-O), 722 (C=CH); MS m/z (rel intensity) 291 (92), 247 (31), 191 (100).

15 3-nitro-N-(5-carboxypentyl)phthalimide (124)

3-nitrophthalic anhydride (0.5 g, 0.0026 mol) and 6-aminohexanoic acid (0.34 g, 0.0026 mol) were refluxed as above overnight. The clear solution was purified as per 120 to yield 0.75 g (95 %) 124 as a pale yellow powder: mp=144°C; R<sub>f</sub> 0.68 (A): R<sub>f</sub> 0.89 (C): R<sub>f</sub> 0.71 (D): IR (cm<sup>-1</sup>): 2800-3180 (OH), 3096 (C=CH), 2620 (C-H), 1777 (C=O), 1723 (bs, C=O), 1617 (C=C), 1543 (N=O), 1468 (C=C), 1442 (C=C), 1395 (C-O), 1359 (N=O), 1057 (C-O), 723 (C=CH); MS m/z (rel intensity) 305 (100), 191 (17).

3-nitro-N-(p-carboxyphenyl)phthalimide (125)

3-nitrophthalic anhydride (0.79 g, 0.0041 mol) and p-aminobenzoic acid (0.56 g, 0.0041 mol) were refluxed as above overnight. Concentration of the solution under vacuum by rotary evaporator and crystallisation of the product from EtOH/H<sub>2</sub>O yielded 1.1 g (68%) of 125 as a vibrant light yellow powder: mp=338-340°C; R<sub>f</sub> 0.76 (A): R<sub>f</sub> 0.89 (C): R<sub>f</sub> 0.66 (D): IR (cm<sup>-1</sup>): 2750-3125 (OH), 3091 (C=CH), 2671 (C-H), 1782 (C=O), 1736 (C=O), 1693 (C=O), 1610 (C=C), 1585

(C=C), 1529 (N=O), 1513 (C=C), 1433 (C=C), 1378 (C-O), 1360 (N=O), 1291 (C-O), 766 (C=CH); MS *m/z* (rel intensity) 311 (100), 267 (25), 191 (15).

**3-nitro-N-(*m*-carboxyphenyl)phthalimide (126)**

3-nitrophthalic anhydride (0.79 g, 0.0041 mol) and *m*-aminobenzoic acid (5) (0.56 g, 0.0041 mol) were refluxed as above overnight. Concentration of the solution under vacuum by rotary evaporator and crystallisation of the product from EtOH/H<sub>2</sub>O yielded 1.23 g (76%) of 126 as a vibrant yellow powder: mp=354-355°C; R<sub>f</sub> 0.77 (A): R<sub>f</sub> 0.84 (C): R<sub>f</sub> 0.54 (D): IR (cm<sup>-1</sup>): 2740-3100 (OH), 3088 (C=CH), 2665 (C-H), 1776 (C=O), 1725 (bs, C=O), 1614 (C=C), 1542 (N=O), 1460 (C=C), 10 1420 (C=C), 1382 (C-O), 1356 (N=O), 1120 (C-O), 717 (C=CH); MS *m/z* (rel intensity) 311 (100), 267 (65), 191 (60).

**3-nitro-N-(*o*-carboxyphenyl)phthalimide (127)**

3-nitrophthalic anhydride (1.0 g, 0.0052 mol) and *o*-aminobenzoic acid (0.71 g, 0.0052 mol) were refluxed as above for four days. The clear solution was purified (15) as per 120 to yield 0.34 g (21 %) 127 as pale orange grains: mp=190-192°C; R<sub>f</sub> 0.74 (A): R<sub>f</sub> 0.87 (C): R<sub>f</sub> 0.62 (E): IR (cm<sup>-1</sup>): 2700-3300 (OH), 3093 (C=CH), 2620 (C-H), 1718 (C=O), 1681 (bs, C=O), 1609 (C=C), 1592 (C=O), 1534 (N=O), 1482 (C=C), 1451 (C=C), 1360 (N=O), 1316 (C-O), 1257 (C-O), 771 (C=CH); MS *m/z* (rel intensity) 311 (50), 285 (100), 241 (55), 122 (45)..

**20 4-nitro-N-(1-carboxymethyl)phthalimide (140)**

4-nitrophthalic anhydride (0.25 g, 0.0013 mol) and glycine (0.097 g, 0.0013 mol) were refluxed as above overnight. The clear solution was purified as per 120 to yield 0.28 g (86 %) 140 as very pale yellow crystals: mp=195-96°C; R<sub>f</sub> 0.79 (A): R<sub>f</sub> 0.75 (B): R<sub>f</sub> 0.28 (D): IR (cm<sup>-1</sup>): 2811-3150 (OH), 3115 (C=CH), 1787 (C=O), 25 1730 (bs, C=O), 1622 (C=C), 1551 (N=O), 1412 (C=C), 1391 (C-O), 1351 (N=O), 1117 (C-O), 720 (C=CH); MS *m/z* (rel intensity) 250 (7), 249 (62), 205 (100), 122 (10).

**4-nitro-N-(2-carboxyethyl)phthalimide (141)**

4-nitrophthalic anhydride (0.25 g, 0.0013 mol) and  $\beta$ -alanine (0.115 g, 0.0013 mol) were refluxed as above overnight. The clear solution was purified as per 120 to yield 0.31 g (90 %) 141 as a very pale yellow powder: mp=206-208°C; R<sub>f</sub> 5 0.84 (A): R<sub>f</sub> 0.81 (B): R<sub>f</sub> 0.55 (D): IR (cm<sup>-1</sup>): 2800-3125 (OH), 3109 (C=CH), 2646 (C-H), 1780 (C=O), 1718 (bs, C=O), 1621 (C=C), 1536 (N=O), 1441 (C=C), 1395 (C-O), 1346 (N=O), 1228 (C-O), 724 (C=CH); MS m/z (rel intensity) 263 (100), 191 (36).

**4-nitro-N-(3-carboxypropyl)phthalimide (142)**

10 4-nitrophthalic anhydride (0.25 g, 0.0013 mol) and 4-aminobutyric acid (0.134 g, 0.0013 mol) were refluxed as above overnight. The clear solution was purified as per 120 to yield 0.35 g (98 %) 142 as very pale yellow powder: mp=176-178°C; R<sub>f</sub> 0.82 (A): R<sub>f</sub> 0.83 (B): R<sub>f</sub> 0.71 (D): IR (cm<sup>-1</sup>): 3000-3300 (OH), 3122 (C=CH), 1775 (C=O), 1707 (bs, C=O), 1617 (C=C), 1545 (N=O), 1446 (C=C), 1399 15 (C-O), 1349 (N=O), 1167 (C-O), 722 (C=CH); MS m/z (rel intensity) 291 (100), 191(8).

**4-nitro-N-(4-carboxybutyl)phthalimide (143)**

4-nitrophthalic anhydride (0.25 g, 0.0013 mol) and 5-aminopentanoic acid (0.152 g, 0.0013 mol) were refluxed as above overnight. The clear solution was 20 purified as per 120 to yield 0.37 g (98 %) 143 as dull white crystals: mp=172°C; R<sub>f</sub> 0.93 (A): R<sub>f</sub> 0.83 (B): R<sub>f</sub> 0.69 (D): <sup>1</sup>H NMR (DMSO-d<sub>6</sub>)  $\delta$  1.83 (m, 2H), 2.29 (t, J=7.2 Hz, 2H), 3.64 (t, J=6.7 Hz, 2H), 8.01 (d, J=7.6 Hz, 1H), 8.45 (d, J=1.9 Hz, 1H), 8.59 (dd, J=7.6, 1.9 Hz, 1H); IR (cm<sup>-1</sup>): 2750-3200 (OH), 3056 (C=CH), 2620 (C-H), 1773 (C=O), 1707 (bs, C=O), 1624 (C=C), 1543 (N=O), 1438 (C=C), 1403 25 (C-O), 1351 (N=O), 1217 (C-O), 1068 (C-O), 723 (C=CH); MS m/z (rel intensity) 305 (100).

**4-nitro-N-(5-carboxypentyl)phthalimide (144)**

4-nitrophthalic anhydride (0.25 g, 0.0013 mol) and 6-aminohexanoic acid (0.177 g, 0.0013 mol) were refluxed as above overnight. The clear solution was

purified as per 120 to yield 0.39 g (97 %) 144 as very pale dull orange crystals:  
mp=140°C; R<sub>f</sub> 0.86 (A): R<sub>f</sub> 0.85 (B): R<sub>f</sub> 0.75 (D): IR (cm<sup>-1</sup>): 2875-3125 (OH),  
3064 (C=CH), 1775 (C=O), 1706 (bs, C=O), 1624 (C=C), 1544 (N=O), 1437 (C=C),  
1398 (C-O), 1348 (N=O), 1069 (C-O), 722 (C=CH); MS m/z (rel intensity) 277  
5 (100), 251 (11), 191 (124).

4-nitro-N-(*p*-carboxyphenyl)phthalimide (145)

4-nitrophthalic anhydride (0.25 g, 0.0013 mol) and *p*-aminobenzoic acid  
(0.18 g, 0.0013 mol) were refluxed as above overnight. The clear solution was  
purified as per 120 to yield 0.33 g (81 %) 145 as a very pale dull yellow powder:  
10 mp=331-332°C; R<sub>f</sub> 0.86 (A): R<sub>f</sub> 0.92 (C): R<sub>f</sub> 0.56 (D): IR (cm<sup>-1</sup>): 2750-3150 (OH),  
3116 (C=CH), 2684 (C-H), 1780 (C=O), 1730 (bs, C=O), 1622 (C=C), 1608 (C=C),  
1543 (N=O), 1510 (C=C), 1434 (C=C), 1383 (C-O), 1350 (N=O), 1103 (C-O), 727  
(C=CH); MS m/z (rel intensity) 311 (100), 267 (87).

4-nitro-N-(*m*-carboxyphenyl)phthalimide (146)

15 4-nitrophthalic anhydride (0.25 g, 0.0013 mol) and *m*-aminobenzoic acid  
(0.18 g, 0.0013 mol) were refluxed as above overnight. The clear solution was  
purified as per 120 to yield 0.30 g (74 %) 146 as a very pale dull yellow powder:  
mp=368-370°C; R<sub>f</sub> 0.83 (A): R<sub>f</sub> 0.93 (C): R<sub>f</sub> 0.53 (D): IR (cm<sup>-1</sup>): 2700-3280 (OH),  
3122 (C=CH), 2687 (C-H), 1781 (C=O), 1727 (bs, C=O), 1622 (C=C), 1588 (C=C),  
20 1546 (N=O), 1461 (C=C), 1420 (C=C), 1386 (C-O), 1350 (N=O), 1113 (C-O), 727  
(C=CH); MS m/z (rel intensity) 311 (68), 285 (46), 267 (46), 191 (100).

4-nitro-N-(*o*-carboxyphenyl)phthalimide (147)

4-nitrophthalic anhydride (0.5g, 0.0026 mol) and *o*-aminobenzoic acid (0.36  
g, 0.0026 mol) were refluxed as above for four days. The clear solution was purified  
25 as per 120 with an additional final crystallisation from acetone/H<sub>2</sub>O to yield 0.12 g  
(15 %) 147 as a very pale dull yellow powder: mp=242-243 °C; R<sub>f</sub> 0.80 (A): R<sub>f</sub>  
0.88 (C): R<sub>f</sub> 0.49 (D): IR (cm<sup>-1</sup>): 2725-3100 (OH), 3071 (C=CH), 2646 (C-H), 1786  
(C=O), 1730 (C=O), 1693 (C=O), 1620 (C=C), 1601 (C=C), 1538 (N=O), 1491

(C=C), 1452 (C=C), 1383 (C-O), 1345 (N=O), 1123 (C-O), 723 (C=CH); MS *m/z* (rel intensity) 311 (33), 267 (76), 241 (54), 136 (100)..

Method B:

4-carboxy-N-phenylphthalimide (109)

- 5 4-carboxyphthalic anhydride (benzene tricarboxylic acid anhydride) (1.0 g, 0.0052 mol), aniline (0.96 g, 0.0104 mol), and 70-80 mls of glacial acetic acid were added to a 100 ml round-bottom flask equipped with a reflux condenser, heating mantle and stir plate. The system was placed under a N<sub>2</sub> atmosphere. A white solid precipitated out of the clear pale yellow solution within 1 minute. The mixture was
- 10 heated to a gentle reflux. More precipitate formed during the course of the reaction. After 12 hours the mixture was cooled to room temperature and concentrated under vacuum with a rotary evaporator. The crude material was reprecipitated in 1,4-dioxane and IN HCl. The resultant white precipitate was filtered through a Buchner funnel and washed three times with 15 ml of water. The product was dried in air for
- 15 24 hours and then *in vacuo* for 48-72 hours to afford 1.25 g (90%) 109 as a white fluffy solid: mp=257-258°C; R<sub>f</sub> 0.83 (A): R<sub>f</sub> 0.76 (B): R<sub>f</sub> 0.62 (D): IR (cm<sup>-1</sup>): 2800-3125 (OH), 3071 (C=CH), 2665 (C-H), 1788 (C=O), 1719 (bs, C=O), 1602 (C=C), 1596 (C=C), 1504 (C=C), 1487 (C=C), 1399 (C-O), 1124 (C-O), 724 (C=CH); MS *m/z* (rel intensity) 267 (16), 266 (100).
- 20 Synthesis of Amino-Phthalimide Derivatives
- 4-amino-N-(*p*-carboxyphenyl)phthalimide (165)  
4-nitro-N-(*p*-carboxyphenyl)phthalimide (145) (0.2 g, 0.6 mmol) partially dissolved in 30 ml of 1,4-dioxane and 2 ml HOAc was added to a three necked round bottom flask equipped with a rubber septum, a gas inlet adapter and an
- 25 adapter tightly fitted with a balloon. After the reaction vessel was purged three times with N<sub>2</sub>, 0.02g of 10% Pd on activated charcoal was added. The reaction vessel was then flushed three times with H<sub>2</sub>. The heterogenous mixture was vigorously stirred under a hydrogen atmosphere overnight. The catalyst was removed by filtration through a celite pad and the filtrate concentrated under vacuum to give a bright
- 30 yellow solid. The crude material which contained unreacted nitro compound was

resubjected to the above procedure. Resulting crude material was triturated with hot 1,4-dioxane and undissolved material removed by filtration. The filtrate was diluted with water. The ensuing solid was filtered through a Buchner funnel and washed three times with 1 ml water. The product was dried in air for a short time 5 and then *in vacuo* for 48-72 hours to afford 0.071 g (39%) 165 as a dark yellow solid: mp=270-271 °C; R<sub>f</sub> 0.88 (A): R<sub>f</sub> 0.80 (C): R<sub>f</sub> 0.49 (D): IR (cm<sup>-1</sup>): 3366 (NH), 3193 (NH), 2750-3200 (OH), 3075 (C=CH), 2669 (C-H), 1767 (C=O), 1752 (C=O), 1701 (bs, C=O), 1637 (C=C), 1607 (C=C), 1514 (C=C), 1482 (C=C), 1370 (C-N), 1220 (C-O), 740 (C=CH); MS *m/z* (rel intensity) 282 (16), 281 (100), 237 (71) 120 10 (43).

#### 4-amino-N-(*m*-carboxyphenyl)phthalimide (166)

4-nitro-N-(*m*-carboxyphenyl)phthalimide (145) (0.2 g, 0.6 mmol) was catalytically hydrogenated as 165. Crystallization from 1,4-dioxane/ 1N HCl to yield 0.091 g (50%) of 166 as a dark orange solid: mp=306-308 °C; R<sub>f</sub> 0.81 (A): R<sub>f</sub> 0.79 15 (B): R<sub>f</sub> 0.50 (D): <sup>1</sup>H NMR (DMSO-*d*<sub>6</sub>) δ 6.57 (bs, 2H), 7.05 (d, *J*=8.0 Hz, 1H), 7.06 (d, *J*=7.2 Hz, 1H), 7.50 (dd, *J*=7.2, 8.0 Hz, 1H), 7.67 (m, 2H), 7.97 (m, 2H); IR (cm<sup>-1</sup>): 3393 (NH), 3193 (NH), 2750-3125 (OH), 3082 (C=CH), 2669 (C-H), 1755 (C=O), 1707 (bs, C=O), 1643 (C=C), 1587 (C=C), 1458 (C=C), 1406 (C=C), 1372 (C-N), 1221 (C-O), 755 (C=CH); MS *m/z* (rel intensity) 317 (100) 282 (15), 281 20 (93), 233 (44) 161 (33).

#### Synthesis of Naphthalimide Derivatives:

##### Method A:

###### 3-nitro-N-(*p*-carboxyphenyl)-1,8-naphthalimide (205)

3-nitro-1,8-naphthalic anhydride (0.5 g, 0.0020 mol) and *p*-aminobenzoic 25 acid (0.28 g, 0.0020 mol) were refluxed in dry (distilled from CaH<sub>2</sub>) 1,4-dioxane as per 100 for seven days. The dark orange brown solution was diluted with water until a beige precipitate formed. The precipitate was filtered through a Buchner funnel and washed with water. The crude material was reprecipitated from 1,4-dioxane/ 1N HCl and filtered. Successive fractional recrystallisations in CHCl<sub>3</sub>, 30 afforded 0.17 g (23%) 205 as an orange amber solid: mp=362-364 °C; R<sub>f</sub> 0.80 (A):

$R_f$  0.88 (B):  $R_f$  0.36 (D): IR ( $\text{cm}^{-1}$ ): 2500-3150 (OH), 3079 (C=CH), 2671 (C-H), 1783 (C=O), 1716 (C=O), 1678 (bs, C=O), 1628 (C=C), 1597 (C=C), 1539 (N=O), 1419 (C=C), 1338 (N-O), 1243 (C-O), 787 (C=CH); MS  $m/z$  (rel intensity) 361 (100) 317 (52).

5 3-nitro-N-(*m*-carboxyphenyl)-1,8-naphthalimide (206)

3-nitro-1,8-naphthalic anhydride (0.5 g, 0.0020 mol) and *m*-aminobenzoic acid (0.28 g, 0.0020 mol) were refluxed and the final solution was manipulated as per 205. Crystallization from 1,4-dioxane afforded 0.28 g (39%) of 206 as an yellow amber solid: mp=342-344°C;  $R_f$  0.77 (A):  $R_f$  0.90 (B):  $R_f$  0.56 (D): IR ( $\text{cm}^{-1}$ ): 2800-3125 (OH), 3091(C=CH), 2623 (C-H), 1739 (C=O), 1711 (bs, C=O), 1677 (C=O), 1628 (C=C), 1599 (C=C), 1546 (N=O), 1449 (C=C), 1420 (C=C), 1341 (N-O), 1245 (C-O), 791 (C=CH); MS  $m/z$  (rel intensity) 361 (100) 317 (30).

3-nitro-N-(*o*-carboxyphenyl)-1,8-naphthalimide (207)

3-nitro-1,8-naphthalic anhydride (0.5 g, 0.0020 mol) and *o*-aminobenzoic acid (0.28 g, 0.0020 mol) were refluxed and the final solution was manipulated as per 205. Crystallization from 1,4-dioxane afforded 0.21 g (29%) of 207 as an orange amber solid: mp=234-237°C;  $R_f$  0.80 (A):  $R_f$  0.80 (B):  $R_f$  0.64 (D): IR ( $\text{cm}^{-1}$ ): 2850-3155 (OH), 3071 (C=CH), 2626 (C-H), 1717 (bs, C=O), 1668 (C=O), 1625 (C=C), 1599 (C=C), 1542 (N=O), 1490 (C=C), 1422 (C=C), 1339 (N-O), 1248 (C-O), 789 (C=CH); MS  $m/z$  (rel intensity) 361 (100).

3-nitro-N-(*p*-carboxyphenylmethyl)naphthalimide (208)

3-nitro-1,8-naphthalic anhydride (0.5 g, 0.0020 mol) and 4-(aminomethyl)benzoic acid (0.31 g, 0.0020 mol) were refluxed as per 100 overnight. Precipitate that formed during the course of the reaction was filtered and washed with water. A clean product from the mother liquor fraction was not obtained. Crystallization of the product from 1,4-dioxane/H<sub>2</sub>O yielded 0.30 g (39%) of 208 as a beige powder: mp=334-336°C;  $R_f$  0.89 (A):  $R_f$  0.71 (C):  $R_f$  0.77 (D): IR ( $\text{cm}^{-1}$ ): 2800-3130 (OH), 3084 (C=CH), 2671 (C-H), 1789 (C=O), 1707 (bs, C=O), 1666

(C=O), 1628 (C=C), 1598 (C=C), 1539 (N=O), 1450 (C=C), 1425 (C=C), 1343 (N-O), 1296 (C-O), 788 (C=CH); MS *m/z* (rel intensity) 375 (100), 331 (48), 172 (57).

4-nitro-N-(*p*-carboxyphenyl)-1,8-naphthalimide (225)

4-nitro-1,8-naphthalic anhydride (0.5 g, 0.0020 mol) and *p*-aminobenzoic acid (0.28 g, 0.0020 mol) were refluxed as per 100 for 48 hours. Precipitate that formed during the course of the reaction was filtered and washed with water. A clean product from the mother liquor fraction was not obtained. Crystallization from 1,4-dioxane/ 1N HCl afforded 0.26 g (35%) of 225 as a beige solid: mp=>320°C; R<sub>f</sub> 0.89 (A): R<sub>f</sub> 0.82 (B): R<sub>f</sub> 0.42 (D); <sup>1</sup>H NMR (DMSO-*d*<sub>6</sub>) δ 7.55 (d, *J*=8.3 Hz, 2H), 8.09 (d, *J*=8.3 Hz, 2H), 8.13 (dd, *J*=8.4, 7.7 Hz, 1H), 8.61 (m, 3H), 8.76 (d, *J*=8.4 Hz, 1H); IR (cm<sup>-1</sup>): 2800-3100 (OH), 3079 (C=CH), 2674 (C-H), 1713 (C=O), 1678 (bs, C=O), 1625 (C=C), 1607 (C=C), 1584 (C=C), 1532 (N=O), 1426 (C=C), 1412 (C=C), 1368 (C-O), 1346 (N-O), 1237 (C-O), 785 (C=CH); MS *m/z* (rel intensity) 362 (22), 361 (100).

15 4-nitro-N-(*m*-carboxyphenyl)-1,8-naphthalimide (226)

4-nitro-1,8-naphthalic anhydride (0.5 g, 0.0020 mol) and *p*-aminobenzoic acid (0.28 g, 0.0020 mol) were refluxed as per 100 for 48 hours. Precipitate that formed during the course of the reaction was filtered and washed with water. The dark amber filtrate was concentrated to 20 ml *in vacuo* and diluted with 1N HCl until a beige precipitate formed. The precipitate was filtered through a Buchner funnel and washed with water. Crystallization from 1,4-dioxane/ H<sub>2</sub>O afforded 0.59 g (81%) of 226 as a beige solid: mp=>320°C; R<sub>f</sub> 0.86 (A): R<sub>f</sub> 0.82 (B): R<sub>f</sub> 0.48 (D); <sup>1</sup>H NMR (DMSO-*d*<sub>6</sub>) δ 7.68 (m, 2H), 8.05 (m, 2H), 8.13 (dd, *J*=8.6, 8.4 Hz, 1H), 8.61 (m, 3H), 8.76 (dd, *J*=8.4, 0.8 Hz, 1H); IR (cm<sup>-1</sup>): 2750-3125 (OH), 3075 (C=CH), 2664 (C-H), 1697 (bs, C=O), 1625 (C=C), 1584 (C=C), 1530 (N=O), 1456 (C=C), 1424 (C=C), 1369 (C-O), 1350 (N-O), 1237 (C-O), 784 (C=CH); MS *m/z* (rel intensity) 362 (22), 361 (100).

**Method B:****3-nitro-N-phenyl-1,8-naphthalimide (209)**

3-nitro-1,8-naphthalic anhydride (0.5 g, 0.0020 mol) and aniline (0.38 g, 0.0041 mol) were reacted and purified as per 109. Crystallization from CHCl<sub>3</sub>, 5 afforded 0.38 g (60%) 209 as a beige solid: mp=264-266°C; R<sub>f</sub> 0.81 (A): R<sub>f</sub> 0.89 (C): R<sub>f</sub> 0.77 (D): IR (cm<sup>-1</sup>): 3085 (C=CH), 2670 (C-H), 1713 (C=O), 1667 (bs, C=O), 1596 (C=C), 1542 (N=O), 1509 (C=C), 1416 (C=C), 1335 (N-O), 1244 (C-O), 707 (C=CH); MS m/z (rel intensity) 319 (15), 217 (100) 199 (34) 129 (57).

**Example 2 Assessment of NGF/p75<sup>NTR</sup> binding inhibition**

10 The radio-iodination and receptor binding of NGF (Sutter et al., 1979) was performed with modifications (Ross et al., 1997) as follows: Evaluation of the ability of NCP compounds to inhibit TrkA and p75<sup>NTR</sup> binding was determined by the binding of <sup>125</sup>I-NGF to PC12 cells (rat pheochromocytoma cells expressing TrkA and p75<sup>NTR</sup>; obtained from ATCC) and PC12<sup>mn5</sup> (rat pheochromocytoma cells 15 expressing p75<sup>NTR</sup> only; obtained from Dr. L. Greene, Columbia University, NY). The p75<sup>NTR</sup> is in a low affinity state and a high affinity state, respectively, in these cell types (Ross et al., 1998). PC12 and PC12<sup>mn5</sup> cells were grown in RPMI (Sigma) with 10% heat inactivated donor horse serum and 5% fetal calf serum. Cells were harvested by replacing the medium with calcium, magnesium-free balanced salt 20 solution (Gey's solution) and incubating at 37°C for 15 minutes. Cells were pelleted by centrifugation and suspended in HKR buffer (10 mM Hepes [pH 7.35] containing 125 mM NaCl, 4.8 mM KCl, 1.3 mM CaCl<sub>2</sub>, 1.2 mM MgSO<sub>4</sub>, 1.2 mM KH<sub>2</sub>PO<sub>4</sub>, 1g/L glucose and 1g/L BSA) at a cell concentration of 2x10<sup>6</sup>/mL and kept at 4°C. Triplicate tubes were set up for total binding, non-specific binding and binding in 25 the presence of candidate competitor molecule (i.e., a tube for each data point). Each tube contained <sup>125</sup>I-NGF (at 1 nM), 400,000 cells (for a final cell concentration of 10<sup>6</sup>/mL) and NGF (50 nM, to define non-specific binding), as required. The tubes were incubated for 2 h at 4°C and specific binding evaluated by measuring 30 specifically bound DPM (Ross et al., 1997). Data were analysed and the results expressed as receptor binding observed in the presence of competitor (e.g. NCP compounds) as a percentage of receptor binding in the absence of a competitor.

## CLAIMS

What is claimed is:

1. A method of inhibiting the binding of nerve growth factor to the p75<sup>NTR</sup> receptor, comprising contacting the cells expressing the p75<sup>NTR</sup> receptor with an effective inhibiting amount of a compound of Formula 1,

5

(1)

wherein

D<sub>1</sub>, D<sub>2</sub>, E<sub>1</sub>, E<sub>2</sub> and G are each, independently, an sp<sup>2</sup>-hybridized carbon or nitrogen atom;

10

one of X<sub>1</sub> and X<sub>2</sub> is a hydrogen atom or absent, while the other is an electronegative atom or an electronegative functional group;

R and R<sub>2</sub> are each, independently, an electronegative atom or an electronegative functional group;

15

Y is N, O, S, C-L or N-L, where L is H, alkyl or an electronegative atom or functional group;

Z and Z<sub>1</sub> are each, independently, O, S, CH, C(O), N, NH, N-alkyl, N-cycloalkyl or N-P, where P is a carbohydrate moiety;

T<sub>1</sub> and T<sub>2</sub> are each, independently, an sp<sup>2</sup>- or sp<sup>3</sup>-hybridized carbon or nitrogen atom;

20

a, b and c are each 0 or 1, provided that at least one of b and c is 1; and R<sub>1</sub> is a monocyclic or polycyclic aryl or heteroaryl, monosaccharide or

oligosaccharide, alkyl, cycloalkyl, arylalkyl, alkylamino or alkoxy group which is substituted with at least one substituent selected from the group consisting of electronegative atoms and electronegative functional groups.

25

## 2. The method of Claim 1 wherein

X is alkylcarbonyl; alkylthiocarbonyl; alkoxy carbonyl; aminocarbonyl;

-OH; -CN; -CO<sub>2</sub>H; -SO<sub>3</sub>H; -SO<sub>2</sub>H; PO<sub>3</sub>H<sub>2</sub>; -NO<sub>2</sub>; -ONO<sub>2</sub>; -CNO;

-SH, -CNS, -OSO<sub>3</sub>H, -OC(O)(OH); halomethyl, dihalomethyl or

5 trihalomethyl group or a fluorine, chlorine, bromine or iodine atom;

R and R<sub>2</sub> are each, independently, O, S, CH<sub>2</sub> or NR<sub>3</sub>, where R<sub>3</sub> is H,

alkyl or aryl; and

R<sub>1</sub> is a monocyclic or polycyclic aryl or heteroaryl, alkyl, cycloalkyl,

aryalkyl, monosaccharide or oligosaccharide group, said group being

10 substituted with at least one substituent selected from the group

consisting of alkylcarbonyl; alkylthiocarbonyl; alkoxy carbonyl; -OH;

-CN; -CO<sub>2</sub>H; -SO<sub>3</sub>H; -SO<sub>2</sub>H; -PO<sub>3</sub>H<sub>2</sub>; -NO<sub>2</sub>; -ONO<sub>2</sub>; -CNO, -SH,

-CNS, -OSO<sub>3</sub>H, carboxyalkyl, nitroalkyl, N,N-dialkylaminosulfonyl,

aminocarbonyl, methoxycarbonyl, methoxycarbonylalkyl,

15 cyanocarbonylalkyl, fluoromethyl, difluoromethyl, trifluoromethyl,

chloromethyl, dichloromethyl, trichloromethyl, acetamido, fluorine,

chlorine, bromine and iodine ;or

R<sub>1</sub> is selected from the group consisting of -(CH<sub>2</sub>)<sub>a</sub>PO<sub>3</sub>H<sub>2</sub>; -(CH<sub>2</sub>)<sub>a</sub>NO<sub>2</sub>;

-(CH<sub>2</sub>)<sub>a</sub>OH; -(CH<sub>2</sub>)<sub>a</sub>SO<sub>3</sub>H; -(CH<sub>2</sub>)<sub>a</sub>SO<sub>2</sub>H; O(CH<sub>2</sub>)<sub>a</sub>PO<sub>3</sub>H<sub>2</sub>;

20 -O(CH<sub>2</sub>)<sub>a</sub>COOH; -O(CH<sub>2</sub>)<sub>a</sub>NO<sub>2</sub>; -O(CH<sub>2</sub>)<sub>a</sub>SO<sub>2</sub>H; -O(CH<sub>2</sub>)<sub>a</sub>SO<sub>3</sub>H;

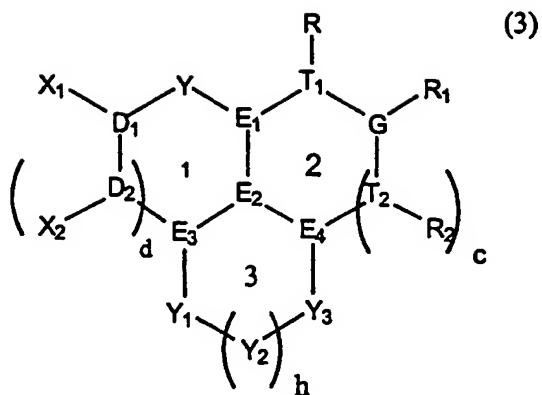

-O(CH<sub>2</sub>)<sub>a</sub>OH; -NH(CH<sub>2</sub>)<sub>a</sub>COOH; -NH(CH<sub>2</sub>)<sub>a</sub>NO<sub>2</sub>; -NH(CH<sub>2</sub>)<sub>a</sub>SO<sub>2</sub>H;

25 -NH(CH<sub>2</sub>)<sub>a</sub>PO<sub>3</sub>H<sub>2</sub> and NH(CH<sub>2</sub>)<sub>a</sub>SO<sub>3</sub>H; wherein a is 1 to about 4.

3. A method of inhibiting the binding of nerve growth factor to the p75<sup>NTR</sup>

receptor, comprising contacting the cells expressing the p75<sup>NTR</sup> receptor with

25 an effective inhibiting amount of a compound of Formula 3,

wherein

D<sub>1</sub>, D<sub>2</sub>, E<sub>1</sub>, E<sub>2</sub>, E<sub>3</sub>, E<sub>4</sub> and G are each, independently, an sp<sup>2</sup>-hybridized carbon  
5 or nitrogen atom;

one of X<sub>1</sub> and X<sub>2</sub> is a hydrogen atom, while the other is an electronegative  
atom or an electronegative functional group;

R and R<sub>2</sub> are each, independently, an electronegative atom or an  
electronegative functional group;

10 Y, Y<sub>1</sub>, Y<sub>2</sub>, and Y<sub>3</sub> are each, independently, N, O, S, C-L or N-L, where L is  
H, alkyl or an electronegative atom or functional group;

T<sub>1</sub> and T<sub>2</sub> are each, independently, an sp<sup>2</sup>- or sp<sup>3</sup>-hybridized carbon or  
nitrogen atom;

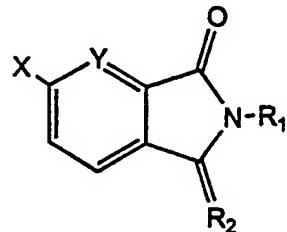

d, h and c are each 0 or 1; and

15 R<sub>1</sub> is a monocyclic or polycyclic aryl or heteroaryl, monosaccharide or  
oligosaccharide which is substituted with at least one acid functional  
group.

4. The method of Claim 3 wherein R<sub>1</sub> is a mono- or polycyclic aryl or  
heteroaryl, monosaccharide or oligosaccharide group which is substituted  
20 with at least one acid functional group selected from the group consisting of  
alkyl-CO<sub>2</sub>H; alkyl-SO<sub>3</sub>H; alkyl-SO<sub>2</sub>H; alkyl-PO<sub>3</sub>H<sub>2</sub>; alkyl-OSO<sub>3</sub>H.

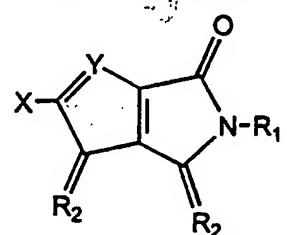

-58-

5. The method of Claim 1 wherein the compound is of the general formula

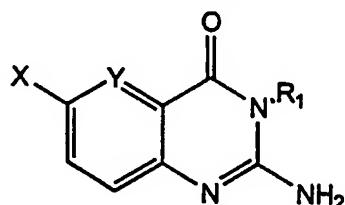

wherein X, Y and R<sub>1</sub> have the meanings given for these variables in Claim 1 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

5 6. The method of Claim 1 wherein the compound is of the general formula

wherein X, Y and R<sub>1</sub> have the meanings given for these variables in Claim 1 and each R<sub>2</sub> is independently O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

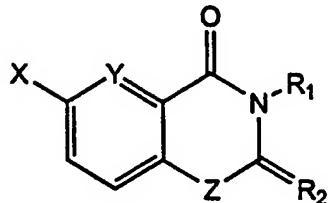

10 7. The method of Claim 1 wherein the compound is of the general formula

wherein X, Y and R<sub>1</sub> have the meanings given for these variables in Claim 1.

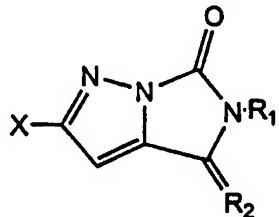

-59-

8. The method of Claim 1 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 1 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

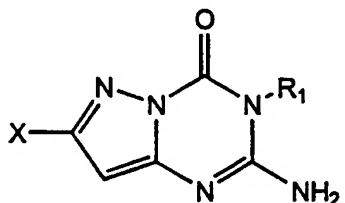

5 9. The method of Claim 1 wherein the compound is of the general formula

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 1 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

10. The method of Claim 1 wherein the compound is of the general formula

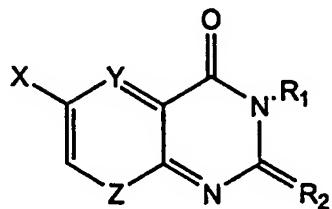

10

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 1.

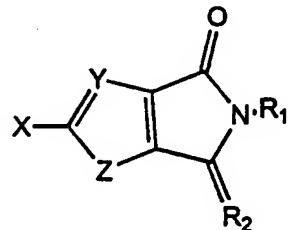

-60-

11. The method of Claim 1 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 1 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

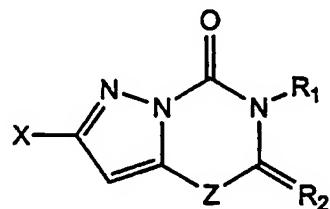

5 12. The method of Claim 1 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 1 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

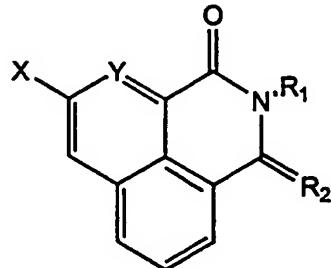

13. The method of Claim 1 wherein the compound is of the general formula

10

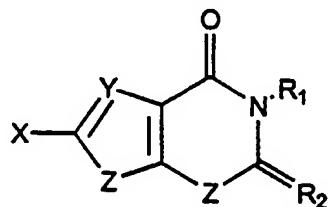

wherein X, Z and R<sub>1</sub> have the meanings given for these variables in Claim 1 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

14. The method of Claim 3 wherein the compound is of the general formula

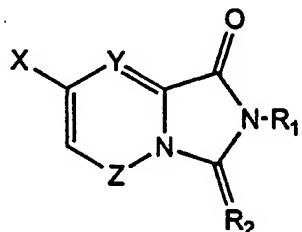

wherein X, Y and R<sub>1</sub> have the meanings given for these variables in Claim 1 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

5 15. The method of Claim 1 wherein the compound is of the general formula

wherein X, Y, R<sub>1</sub> have the meanings given for these variables in Claim 1, each Z, independently, has one of the meanings given for Z in Claim 1, and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

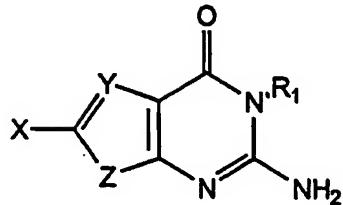

10 16. The method of Claim 1 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 1 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

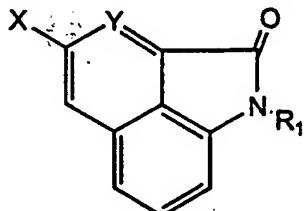

-62-

17. The method of Claim 1 wherein the compound is of the general formula

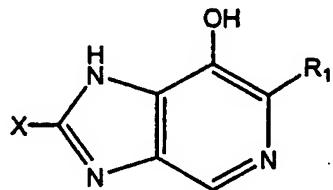

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 1.

5 18. The method of Claim 3 wherein the compound is of the general formula

wherein X, Y and R<sub>1</sub> have the meanings given for these variables in Claim 3.

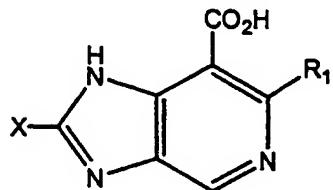

19. The method of Claim 1 wherein the compound is of the formula

10

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 1.

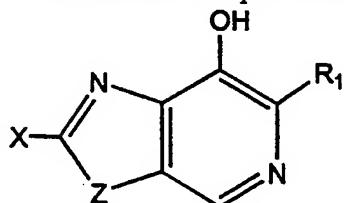

20. The method of Claim 1 wherein the compound is of the formula

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 1.

-63-

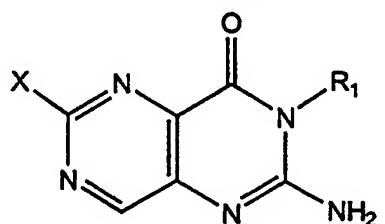

21. The method of Claim 1 wherein the compound is of the formula

wherein X, Z and R<sub>1</sub> have the meanings given for these variables in Claim 1.

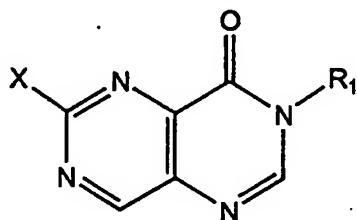

22. The method of Claim 1 wherein the compound is of the formula

5

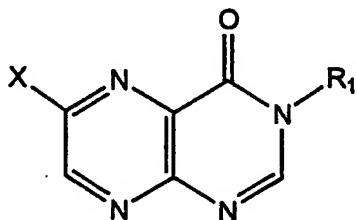

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 1.

23. The method of Claim 1 wherein the compound is of the formula

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 1.

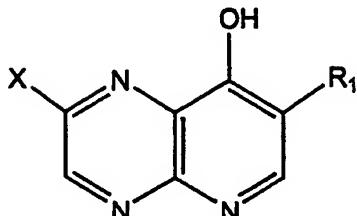

10 24. The method of Claim 1 wherein the compound is of the formula

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 1.

-64-

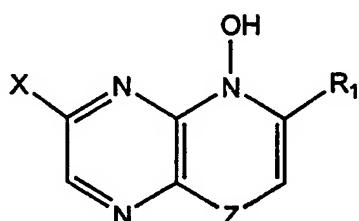

25. The method of Claim 1 wherein the compound is of the formula

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 1.

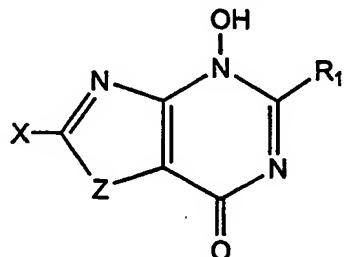

26. The method of Claim 1 wherein the compound is of the formula

5

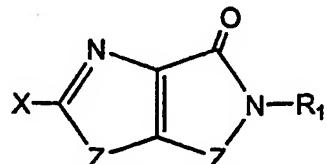

wherein X, Z and R<sub>1</sub> have the meanings given for these variables in Claim 1.

27. The method of Claim 1 wherein the compound is of the formula

wherein X, Z and R<sub>1</sub> have the meanings given for these variables in Claim 1.

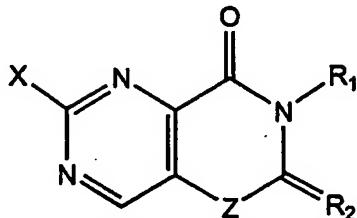

10 28. The method of Claim 1 wherein the compound is of the formula

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 1 and each Z, independently, has one of the meanings given for Z in Claim 1.

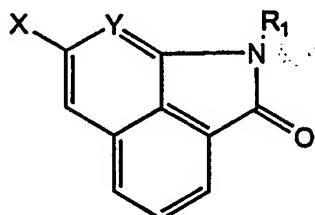

-65-

29. The method of Claim 3 wherein the compound is of the formula

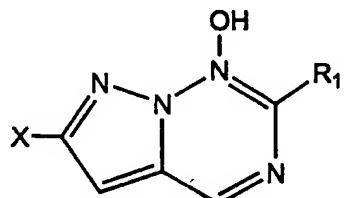

wherein X, Z and R<sub>1</sub> have the meanings given for these variables in Claim 1, and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

5 30. The method of Claim 3 wherein the compound is of the formula

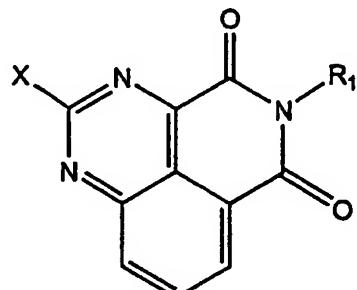

wherein X, Y and R<sub>1</sub> have the meanings given for these variables in Claim 3.

31. The method of Claim 1 wherein the compound is of the formula

10 wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 1.

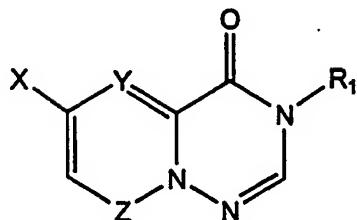

32. The method of Claim 3 wherein the compound is of the formula

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 3.

-66-

33. The method of Claim 1 wherein the compound is of the formula

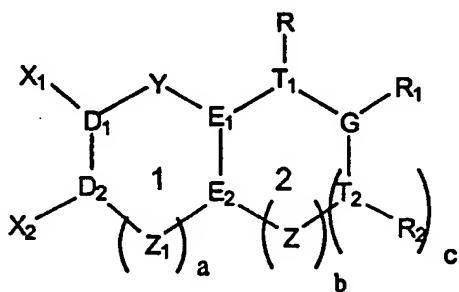

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 1.

5 34. A method of treating a condition characterized by nerve growth factor-mediated cell apoptosis in a patient; said method comprising the step of administering to the patient a therapeutically effective amount of a compound of Formula 1,

10

(1)

wherein

D<sub>1</sub>, D<sub>2</sub>, E<sub>1</sub>, E<sub>2</sub> and G are each, independently, an sp<sup>2</sup>-hybridized carbon or nitrogen atom;

one of X<sub>1</sub> and X<sub>2</sub> is a hydrogen atom or absent, while the other is an electronegative atom or an electronegative functional group;

15 R and R<sub>2</sub> are each, independently, an electronegative atom or an electronegative functional group;

Y is N, O, S, C-L or N-L, where L is H, alkyl or an electronegative atom or functional group;

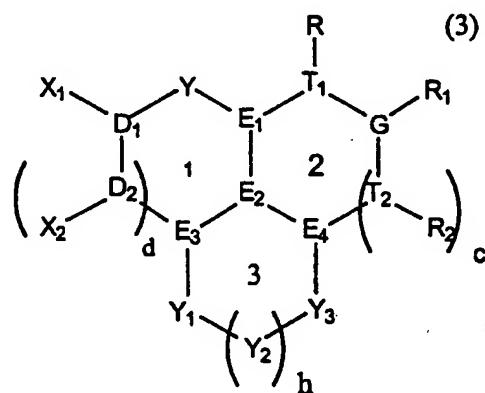

Z and Z<sub>1</sub> are each, independently, O, S, CH, C(O), N, NH, N-alkyl, N-cycloalkyl or N-P, where P is a carbohydrate moiety;  
T<sub>1</sub> and T<sub>2</sub> are each, independently, an sp<sup>2</sup>- or sp<sup>3</sup>-hybridized carbon or nitrogen atom;  
5 a, b and c are each 0 or 1, provided that at least one of b and c is 1; and R<sub>1</sub> is a monocyclic or polycyclic aryl or heteroaryl, monosaccharide or oligosaccharide, alkyl, cycloalkyl, arylalkyl, alkylamino or alkoxy group which is substituted with at least one substituent selected from the group consisting of electronegative atoms and electronegative 10 functional groups.

35. The method of Claim 34 wherein X is alkylcarbonyl; alkylthiocarbonyl; alkoxy carbonyl; aminocarbonyl; -OH; -CN; -CO<sub>2</sub>H; -SO<sub>3</sub>H; -SO<sub>2</sub>H; PO<sub>3</sub>H<sub>2</sub>; -NO<sub>2</sub>; -ONO<sub>2</sub>; -CNO; -SH; -CNS; -OSO<sub>3</sub>H; -OC(O)(OH); halomethyl, dihalomethyl or trihalomethyl group or a fluorine, chlorine, bromine or iodine atom; 15 R and R<sub>2</sub> are each, independently, O, S, CH<sub>2</sub> or NR<sub>3</sub>, where R<sub>3</sub> is H, alkyl or aryl; and R<sub>1</sub> is a monocyclic or polycyclic aryl or heteroaryl group substituted with at least one substituent selected from the group consisting of 20 alkylcarbonyl; alkylthiocarbonyl; alkoxy carbonyl; -OH; -CN; -CO<sub>2</sub>H; -SO<sub>3</sub>H; -SO<sub>2</sub>H; -PO<sub>3</sub>H<sub>2</sub>; -NO<sub>2</sub>; -ONO<sub>2</sub>; -CNO; -SH; -CNS; -OSO<sub>3</sub>H; carboxyalkyl, nitroalkyl, N,N-dialkylaminosulfonyl, aminocarbonyl, methoxycarbonyl, methoxycarbonylalkyl, cyanocarbonylalkyl, 25 fluoromethyl, difluoromethyl, trifluoromethyl, chloromethyl, dichloromethyl, trichloromethyl, acetamido, fluorine, chlorine, bromine and iodine ;or R<sub>1</sub> is selected from the group consisting of -(CH<sub>2</sub>)<sub>a</sub>PO<sub>3</sub>H<sub>2</sub>; -(CH<sub>2</sub>)<sub>a</sub>NO<sub>2</sub>; -(CH<sub>2</sub>)<sub>a</sub>OH; -(CH<sub>2</sub>)<sub>a</sub>SO<sub>3</sub>H; -(CH<sub>2</sub>)<sub>a</sub>SO<sub>2</sub>H; O(CH<sub>2</sub>)<sub>a</sub>PO<sub>3</sub>H<sub>2</sub>;

-O(CH<sub>2</sub>)<sub>a</sub>COOH; -O(CH<sub>2</sub>)<sub>a</sub>NO<sub>2</sub>; -O(CH<sub>2</sub>)<sub>a</sub>SO<sub>2</sub>H; -O(CH<sub>2</sub>)<sub>a</sub>SO<sub>3</sub>H;  
 -O(CH<sub>2</sub>)<sub>a</sub>OH; -NH(CH<sub>2</sub>)<sub>a</sub>COOH; -NH(CH<sub>2</sub>)<sub>a</sub>NO<sub>2</sub>; -NH(CH<sub>2</sub>)<sub>a</sub>SO<sub>2</sub>H;  
 -NH(CH<sub>2</sub>)<sub>a</sub>PO<sub>3</sub>H<sub>2</sub> and NH(CH<sub>2</sub>)<sub>a</sub>SO<sub>3</sub>H; wherein a is 0 to about 4.

5 36. A method of treating a condition characterized by nerve growth factor-mediated cell apoptosis in a patient; said method comprising the step of administering to the patient a therapeutically effective amount of a compound of Formula 3,

10

wherein

D<sub>1</sub>, D<sub>2</sub>, E<sub>1</sub>, E<sub>2</sub>, E<sub>3</sub>, E<sub>4</sub> and G are each, independently, an sp<sup>2</sup>-hybridized carbon or nitrogen atom;

15 one of X<sub>1</sub> and X<sub>2</sub> is a hydrogen atom, while the other is an electronegative atom or an electronegative functional group;

R and R<sub>2</sub> are each, independently, an electronegative atom or an electronegative functional group;

Y, Y<sub>1</sub>, Y<sub>2</sub>, and Y<sub>3</sub> are each, independently, N, O, S, C-L or N-L, where L is H, alkyl or an electronegative atom or functional group;

20 T<sub>1</sub> and T<sub>2</sub> are each, independently, an sp<sup>2</sup>- or sp<sup>3</sup>-hybridized carbon or nitrogen atom;

d, h and c are each 0 or 1; and

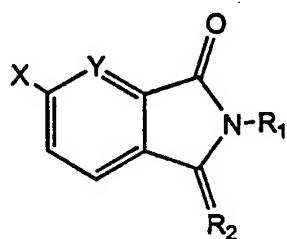

R<sub>1</sub> is a monocyclic or polycyclic aryl or heteroaryl, monosaccharide or

-69-

oligosaccharide, alkyl, cycloalkyl, arylalkyl, alkylamino or alkoxy group which is substituted with at least one substituent selected from the group consisting of acid functional groups.

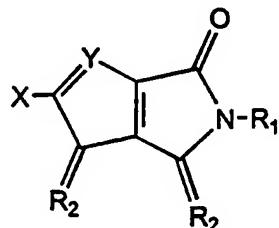

37. The method of Claim 34 wherein the compound is of the general formula

5

wherein X, Y and R<sub>1</sub> have the meanings given for these variables in Claim 34 and R<sub>2</sub> is O, S or CH<sub>2</sub>.

38. The method of Claim 34 wherein the compound is of the general formula

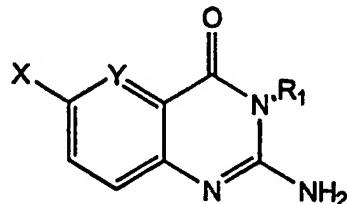

10

wherein X, Y and R<sub>1</sub> have the meanings given for these variables in Claim 34 and each R<sub>2</sub> is independently O, S, CH<sub>2</sub> or N-R<sub>4</sub>, wherein R<sub>4</sub> is H, OH, alkyl or aryl.

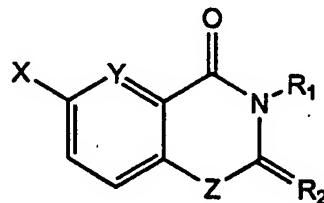

-70-

39. The method of Claim 34 wherein the compound is of the general formula

wherein X, Y and R<sub>1</sub> have the meanings given for these variables in Claim 34.

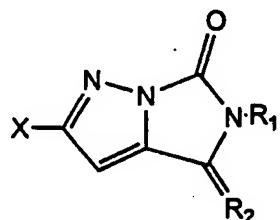

5 40. The method of Claim 34 wherein the compound is of the general formula

wherein X, Y and R<sub>1</sub> have the meanings given for these variables in Claim 34 and R<sub>2</sub> is O, S or CH<sub>2</sub>.

41. The method of Claim 34 wherein the compound is of the general formula

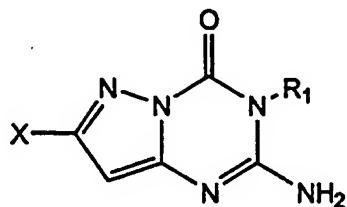

10

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 34 and R<sub>2</sub> is O, S or CH<sub>2</sub>.

-71-

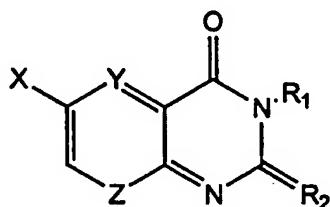

42. The method of Claim 34 wherein the compound is of the general formula

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 34.

43. The method of Claim 34 wherein the compound is of the general formula

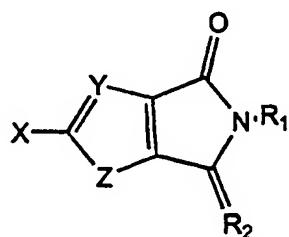

5

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 34 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl or aryl.

44. The method of Claim 34 wherein the compound is of the general formula

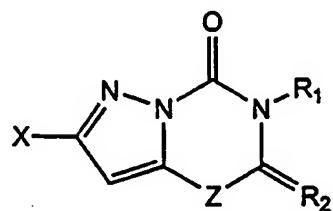

10

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 34 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

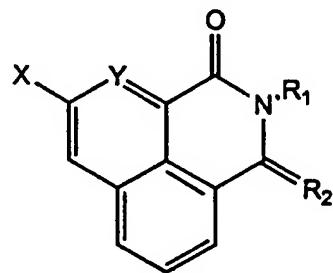

-72-

45. The method of Claim 34 wherein the compound is of the general formula

wherein X, Z and R<sub>1</sub> have the meanings given for these variables in Claim 34 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

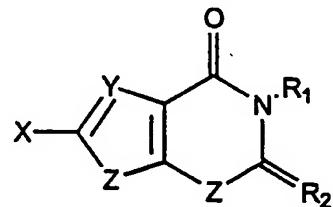

5 46. The method of Claim 36 wherein the compound is of the general formula

wherein X, Y and R<sub>1</sub> have the meanings given for these variables in Claim 36 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

47. The method of Claim 34 wherein the compound is of the general formula

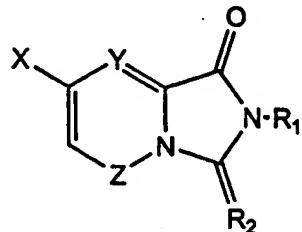

10

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 34 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

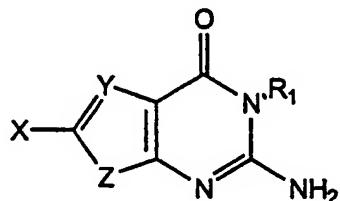

-73-

48. The method of Claim 34 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 34 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

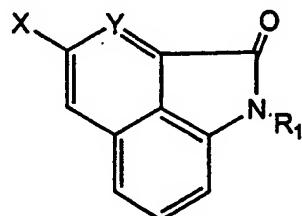

5 49. The method of Claim 34 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 34.

50. The method of Claim 36 wherein the compound is of the general formula

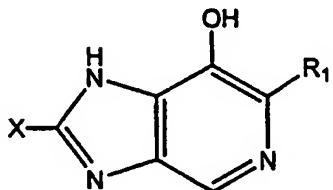

10

wherein X, Y and R<sub>1</sub> have the meanings given for these variables in Claim 36.

-74-

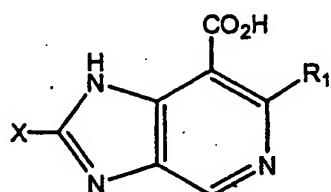

51. The method of Claim 34 wherein the compound is the formula

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 34.

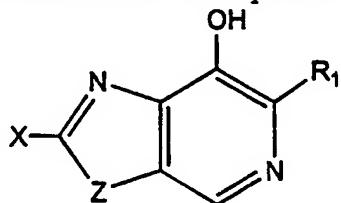

52. The method of Claim 34 wherein the compound is of the formula

5

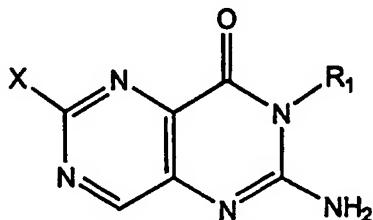

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 34.

53. The method of Claim 34 wherein the compound is of the formula

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 34.

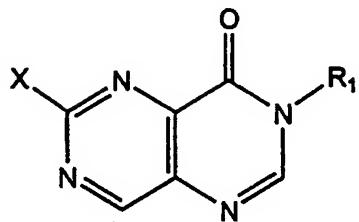

10 54. The method of Claim 34 wherein the compound is of the formula

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 34.

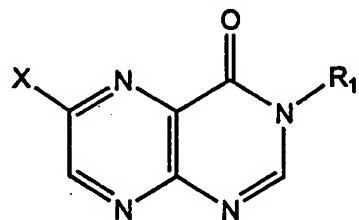

-75-

55. The method of Claim 34 wherein the compound is of the formula

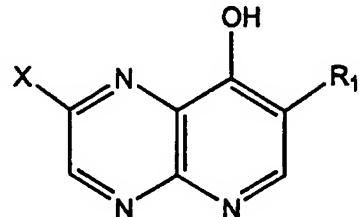

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 34.

56. The method of Claim 34 wherein the compound is of the formula

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 34.

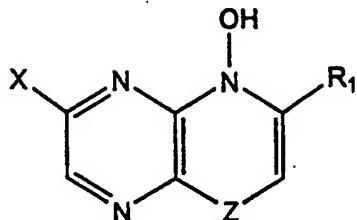

57. The method of Claim 34 wherein the compound is of the formula

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 34.

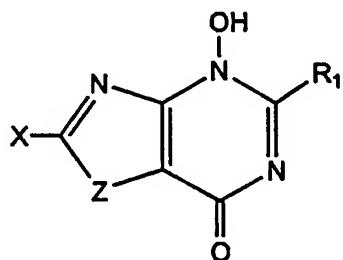

-76-

58. The method of Claim 34 wherein the compound is of the formula

wherein X, Z and R<sub>1</sub> have the meanings given for these variables in Claim 34.

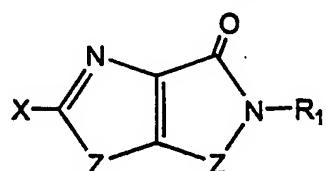

5 59. The method of Claim 34 wherein the compound is of the formula

wherein X, Z and R<sub>1</sub> have the meanings given for these variables in Claim 34.

60. The method of Claim 34 wherein the compound is of the formula

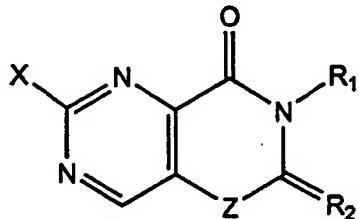

10

wherein X, Z and R<sub>1</sub> have the meanings given for these variables in Claim 34.

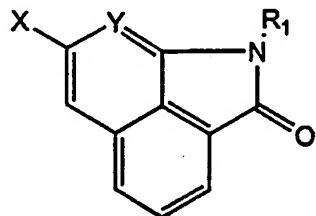

-77-

61. The method of Claim 34 wherein the compound is of the formula

wherein X, Z and R<sub>1</sub> have the meanings given for these variables in Claim 34.

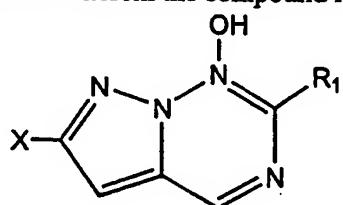

5 62. The method of Claim 36 wherein the compound is of the formula

wherein X, Y and R<sub>1</sub> have the meanings given for these variables in Claim 36.

63. The method of Claim 34 wherein the compound is of the formula

10

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 34.

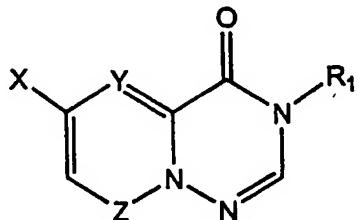

64. The method of Claim 36 wherein the compound is of the formula

wherein X and R<sub>1</sub> have the meanings given for these variables in Claim 36.

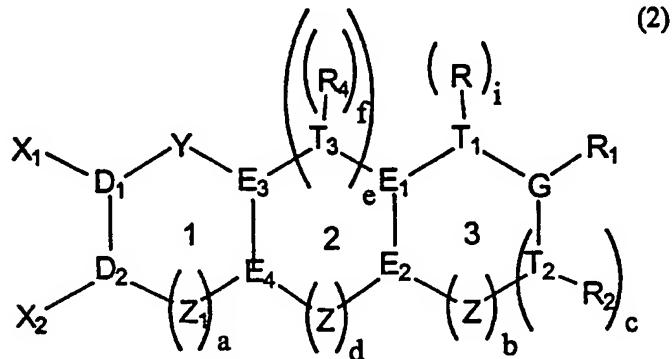

-78-

65. The method of Claim 34 wherein the compound is of the formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 34.

5 66. A method for treating a neurotrophin-mediated condition in a patient, comprising administering to the patient a therapeutically effective amount of a compound of Formula 2,

wherein

10 D<sub>1</sub>, D<sub>2</sub>, E<sub>1</sub>, E<sub>2</sub>, E<sub>3</sub>, E<sub>4</sub> and G are each, independently, an sp<sup>2</sup>-hybridized carbon or nitrogen atom;  
 one of X<sub>1</sub> and X<sub>2</sub> is a hydrogen atom or absent, while the other is an electronegative atom or an electronegative functional group;  
 R, R<sub>2</sub> and R<sub>4</sub> are each, independently, an electronegative atom or an electronegative functional group;  
 15 a, b, c, d, e and f are 0 or 1, provided that at least one of b and c is 1 and at least one of b and e is 1;  
 Z and Z<sub>1</sub> are each, independently, O, S, CH, C(O), N, NH, N-alkyl, N-cycloalkyl and N-P, where P is a carbohydrate moiety;

$T_1$ ,  $T_2$  and  $T_3$  are each, independently, an  $sp^2$ - or  $sp^3$ -hybridized carbon or nitrogen atom; or when  $f$  is 0,  $T_3$  can further have the meanings given for  $Z$  and  $Z_1$ ;

a, b, c, d, e, f and i are each 0 or 1, provided that at least one of b and c is 1, at least one of d and e is 1 and at least one of f and i is 1;

$R_1$  is a monocyclic or polycyclic aryl or heteroaryl, monosaccharide or oligosaccharide, alkyl, cycloalkyl, arylalkyl, alkylamine or alkoxy group which is substituted with at least one substituent selected from the group consisting of electronegative atoms and electronegative functional groups.

67. The method of Claim 66 wherein

$X$  is alkylcarbonyl; alkylthiocarbonyl; alkoxy carbonyl; aminocarbonyl; -OH; -CN; -CO<sub>2</sub>H; -SO<sub>3</sub>H; -SO<sub>2</sub>H; PO<sub>3</sub>H<sub>2</sub>; -NO<sub>2</sub>; -ONO<sub>2</sub>; -CNO; -SH; -CNS; -OSO<sub>3</sub>H; -OC(O)(OH); halomethyl, dihalomethyl or trihalomethyl group or a fluorine, chlorine, bromine or iodine atom;

$R_1$  and  $R_2$  are each, independently, O, S, CH<sub>2</sub> or NR<sub>3</sub>, where R<sub>3</sub> is H, OH alkyl or aryl; and

$R_1$  is a monocyclic or polycyclic aryl or heteroaryl group substituted with at least one substituent selected from the group consisting of

alkylcarbonyl; alkylthiocarbonyl; alkoxy carbonyl; -OH; -CN; -CO<sub>2</sub>H; -SO<sub>3</sub>H; -SO<sub>2</sub>H; -PO<sub>3</sub>H<sub>2</sub>; -NO<sub>2</sub>; -ONO<sub>2</sub>; -CNO; -SH; -CNS; -OSO<sub>3</sub>H, carboxyalkyl, nitroalkyl, N,N-dialkylaminosulfonyl, aminocarbonyl, methoxycarbonyl, methoxycarbonylalkyl, cyanocarbonylalkyl, fluoromethyl, difluoromethyl, trifluoromethyl, chloromethyl, dichloromethyl, trichloromethyl, acetamido, fluorine, chlorine, bromine and iodine ;or

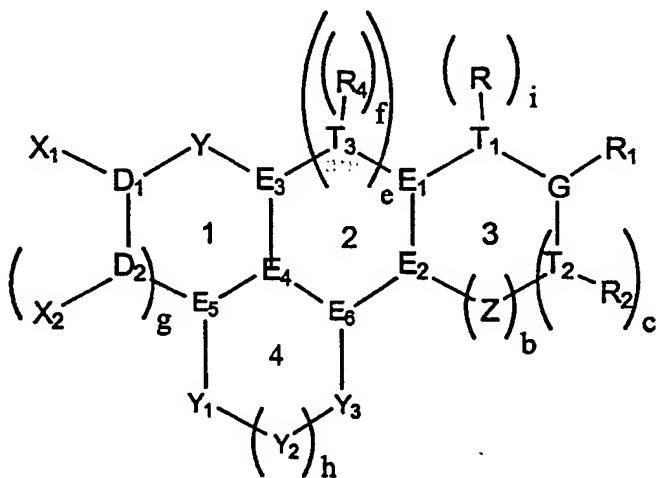

$R_1$  is selected from the group consisting of -(CH<sub>2</sub>)<sub>a</sub>PO<sub>3</sub>H<sub>2</sub>; -(CH<sub>2</sub>)<sub>a</sub>NO<sub>2</sub>; -(CH<sub>2</sub>)<sub>a</sub>OH; -(CH<sub>2</sub>)<sub>a</sub>SO<sub>3</sub>H; -(CH<sub>2</sub>)<sub>a</sub>SO<sub>2</sub>H; O(CH<sub>2</sub>)<sub>a</sub>PO<sub>3</sub>H<sub>2</sub>;

-80-

-O(CH<sub>2</sub>)<sub>a</sub>COOH; -O(CH<sub>2</sub>)<sub>a</sub>NO<sub>2</sub>; -O(CH<sub>2</sub>)<sub>a</sub>SO<sub>2</sub>H; -O(CH<sub>2</sub>)<sub>a</sub>SO<sub>3</sub>H;  
 -O(CH<sub>2</sub>)<sub>a</sub>OH; -NH(CH<sub>2</sub>)<sub>a</sub>COOH; -NH(CH<sub>2</sub>)<sub>a</sub>NO<sub>2</sub>; -NH(CH<sub>2</sub>)<sub>a</sub>SO<sub>2</sub>H;  
 -NH(CH<sub>2</sub>)<sub>a</sub>PO<sub>3</sub>H<sub>2</sub> and NH(CH<sub>2</sub>)<sub>a</sub>SO<sub>3</sub>H; wherein a is 1 to about 4.

68. A method for treating a neurotrophin-mediated condition in a patient,  
 5 comprising administering to the patient a therapeutically effective amount of  
 a compound of Formula 5,

(5),

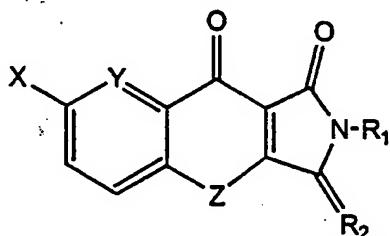

wherein

D<sub>1</sub>, D<sub>2</sub>, E<sub>1</sub>, E<sub>2</sub>, E<sub>3</sub>, E<sub>4</sub>, E<sub>5</sub>, E<sub>6</sub> and G are each, independently, an  $sp^2$ -hybridized carbon or nitrogen atom;  
 10 one of X<sub>1</sub> and X<sub>2</sub> is a hydrogen atom, while the other is an electronegative atom or an electronegative functional group;  
 R, R<sub>2</sub> and R<sub>4</sub> are each, independently, an electronegative atom or an electronegative functional group;  
 15 a, b, c, d, e, f, g, h and i are each 0 or 1, provided that at least one of b and c is 1, and at least one of f and i is 1;  
 Z and Z<sub>1</sub> are each, independently, O, S, CH, C(O), N, NH, N-alkyl, N-cycloalkyl and N-P, where P is a carbohydrate moiety;  
 20 T<sub>1</sub>, T<sub>2</sub> and T<sub>3</sub> are each, independently, an  $sp^2$ - or  $sp^3$ -hybridized carbon or nitrogen atom; or when f is 0, T<sub>3</sub> can further have the meanings given for Z and Z<sub>1</sub>;  
 a, b, c, d and e are each 0 or 1, provided that at least one of b and c is 1 and at

least one of d and e is 1;

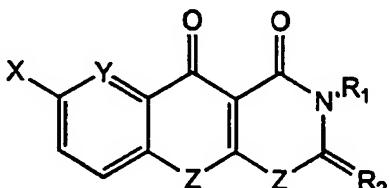

**5**  $R_1$  is a monocyclic or polycyclic aryl or heteroaryl, monosaccharide or oligosaccharide, alkyl, cycloalkyl, arylalkyl, alkylamine or alkoxy group which is substituted with at least one substituent selected from the group consisting of electronegative atoms and electronegative functional groups.

**69.** The method of Claim 66 wherein the compound is of the general formula

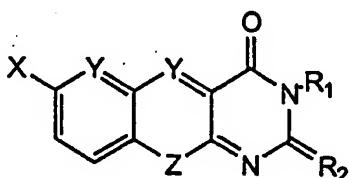

**10** wherein X, Y, Z and  $R_1$  have the meanings given for these variables in Claim 66 and  $R_2$  is O, S,  $CH_2$ , or  $N-R_3$ , wherein  $R_3$  is H, OH, alkyl or aryl.

**70.** The method of Claim 66 wherein the compound is of the general formula

wherein X, Y, Z and  $R_1$  have the meanings given for these variables in Claim 66 and  $R_2$  is O, S,  $CH_2$ , or  $N-R_3$ , wherein  $R_3$  is H, OH, alkyl and aryl.

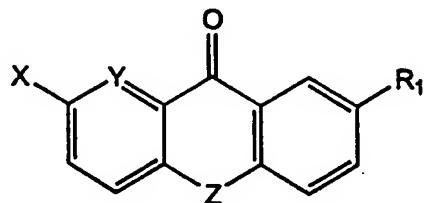

**15** **71.** The method of Claim 66 wherein the compound is of the general formula

wherein X, Y, Z and  $R_1$  have the meanings given for these variables in Claim 66 and  $R_2$  is O, S,  $CH_2$ , or  $N-R_3$ , wherein  $R_3$  is H, OH, alkyl and aryl.

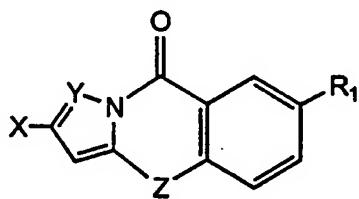

-82-

72. The method of Claim 66 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 66 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

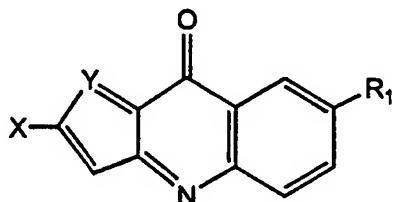

5 73. The method of Claim 66 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 66 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

74. The method of Claim 68 wherein the compound is of the general formula

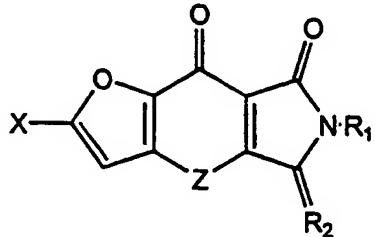

10

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 66 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

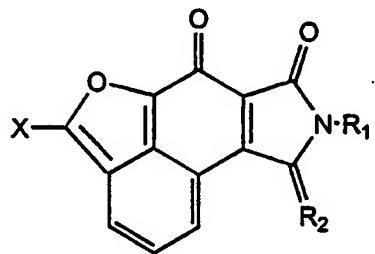

-83-

75. The method of Claim 66 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 66 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

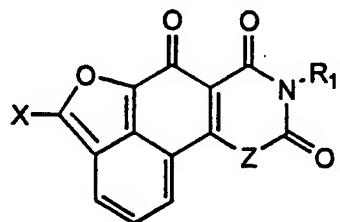

5 76. The method of Claim 68 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 68 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

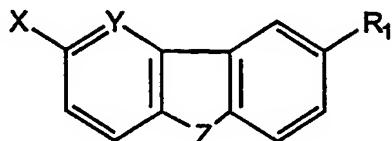

77. The method of Claim 68 wherein the compound is of the general formula

10

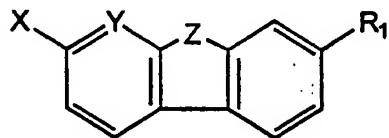

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 68 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

78. The method of Claim 66 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 66 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

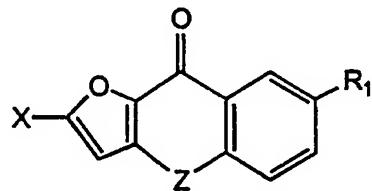

5 79. The method of Claim 66 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 66 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

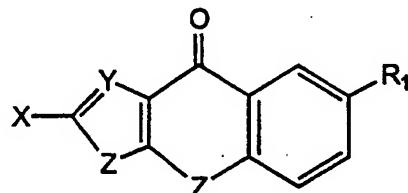

80. The method of Claim 66 wherein the compound is of the general formula

10

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 66 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

81. The method of Claim 66 wherein the compound is of the general formula

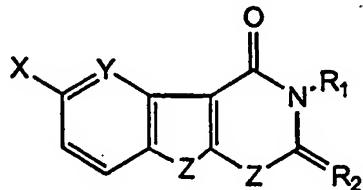

15

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 66 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

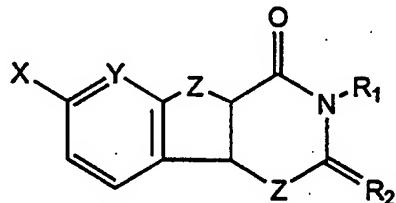

-85-

82. The method of Claim 66 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 66 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

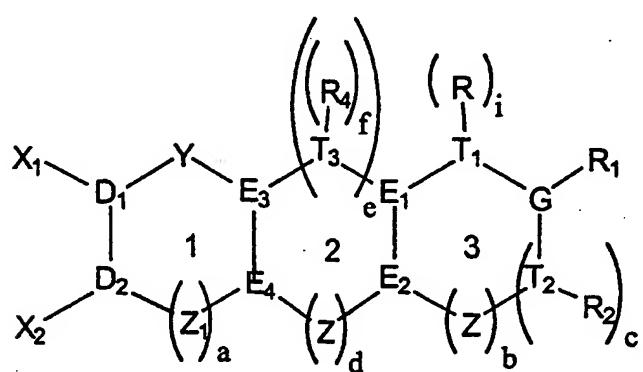

5 83. The method of Claim 66 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 66 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

84. A method of treating a condition characterized by nerve growth factor-mediated cell apoptosis in a patient; said method comprising the step of administering to the patient a therapeutically effective amount of a compound of Formula 2,

(2),

wherein

D<sub>1</sub>, D<sub>2</sub>, E<sub>1</sub>, E<sub>2</sub>, E<sub>3</sub>, E<sub>4</sub> and G are each, independently, an sp<sup>2</sup>-hybridized carbon or nitrogen atom;

one of X<sub>1</sub> and X<sub>2</sub> is a hydrogen atom or absent, while the other is an electronegative atom or an electronegative functional group;

5 R, R<sub>2</sub> and R<sub>4</sub> are each, independently, an electronegative atom or an electronegative functional group;

a, b, c, d, e, f and i are 0 or 1, provided that at least one of b and c is 1, at least one of b and e is 1 and at least one of f and i is 1;

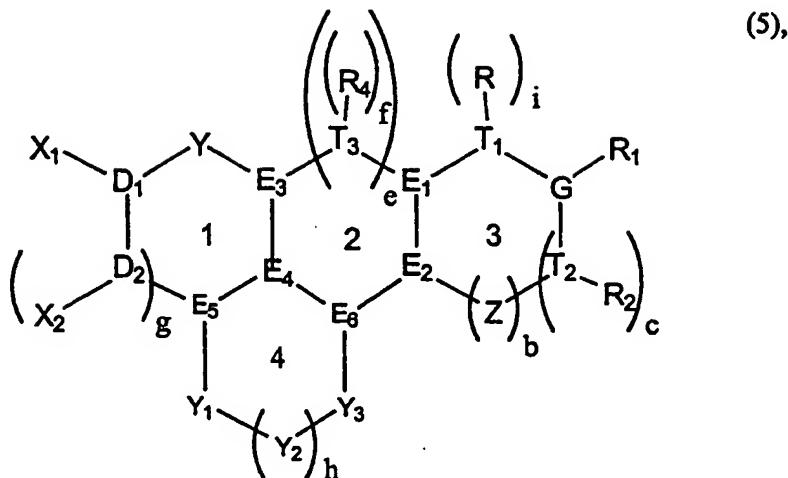

Z and Z<sub>1</sub> are each, independently, O, S, CH, C(O), N, NH, N-alkyl, N-10 cycloalkyl and N-P, where P is a carbohydrate moiety;

T<sub>1</sub>, T<sub>2</sub> and T<sub>3</sub> are each, independently, an sp<sup>2</sup>- or sp<sup>3</sup>-hybridized carbon or nitrogen atom; or when f is 0, T<sub>3</sub> can further have the meanings given for Z and Z<sub>1</sub>;

a, b, c, d and e are each 0 or 1, provided that at least one of b and c is 1 and at 15 least one of d and e is 1;

R<sub>1</sub> is a monocyclic or polycyclic aryl or heteroaryl, monosaccharide or oligosaccharide, alkyl, cycloalkyl, arylalkyl, alkylamine or alkoxy group which is substituted with at least one substituent selected from the group consisting of electronegative atoms and electronegative 20 functional groups.

85. A method of treating a condition characterized by nerve growth factor-mediated cell apoptosis in a patient; said method comprising the step of administering to the patient a therapeutically effective amount of a compound of Formula 5,

wherein

$D_1$ ,  $D_2$ ,  $E_1$ ,  $E_2$ ,  $E_3$ ,  $E_4$ ,  $E_5$ ,  $E_6$  and  $G$  are each, independently, an  $sp^2$ -hybridized carbon or nitrogen atom;

5 one of  $X_1$  and  $X_2$  is a hydrogen atom, while the other is an electronegative atom or an electronegative functional group;

$R$ ,  $R_2$  and  $R_4$  are each, independently, an electronegative atom or an electronegative functional group;

10  $b$ ,  $c$ ,  $f$ ,  $g$ ,  $h$  and  $i$  are 0 or 1, provided that at least one of  $b$  and  $c$  is 1 and one of  $f$  and  $i$  is 1;

$Z$  and  $Z_1$  are each, independently, O, S, CH, C(O), N, NH, N-alkyl, N-cycloalkyl and N-P, where P is a carbohydrate moiety;

15  $T_1$ ,  $T_2$  and  $T_3$  are each, independently, an  $sp^2$ - or  $sp^3$ -hybridized carbon or nitrogen atom; or when  $f$  is 0,  $T_3$  can further have the meanings given for  $Z$  and  $Z_1$ ;

$R_1$  is a monocyclic or polycyclic aryl or heteroaryl, monosaccharide or oligosaccharide, alkyl, cycloalkyl, arylalkyl, alkylamine or alkoxy group which is substituted with at least one substituent selected from the group consisting of electronegative atoms and electronegative functional groups.

86. The method of Claim 84 wherein

X is alkylcarbonyl; alkylthiocarbonyl; alkoxycarbonyl; aminocarbonyl; -OH; -CN; -CO<sub>2</sub>H; -SO<sub>3</sub>H; -SO<sub>2</sub>H; PO<sub>3</sub>H<sub>2</sub>; -NO<sub>2</sub>; -ONO<sub>2</sub>; -CNO; -SH; -CNS; -OSO<sub>3</sub>H; -OC(O)(OH); halomethyl, dihalomethyl or trihalomethyl group or a fluorine, chlorine, bromine or iodine atom;

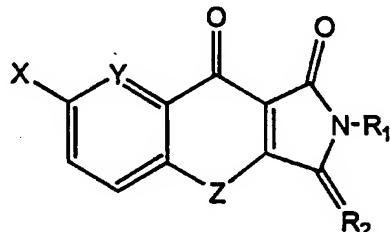

5 R and R<sub>2</sub> are each, independently, O, S, CH<sub>2</sub> or NR<sub>3</sub>, where R<sub>3</sub> is H, alkyl or aryl; and

R<sub>1</sub> is a monocyclic or polycyclic aryl or heteroaryl group substituted with at least one substituent selected from the group consisting of

10 alkylcarbonyl; alkylthiocarbonyl; alkoxycarbonyl; -OH; -CN; -CO<sub>2</sub>H; -SO<sub>3</sub>H; -SO<sub>2</sub>H; -PO<sub>3</sub>H<sub>2</sub>; -NO<sub>2</sub>; -ONO<sub>2</sub>; -CNO; -SH; -CNS; -OSO<sub>3</sub>H, carboxyalkyl, nitroalkyl, N,N-dialkylaminosulfonyl, aminocarbonyl, methoxycarbonyl, methoxycarbonylalkyl, cyanocarbonylalkyl, fluoromethyl, difluoromethyl, trifluoromethyl, chloromethyl, dichloromethyl, trichloromethyl, acetamido, fluorine, chlorine, bromine and iodine ;or

15 R<sub>1</sub> is selected from the group consisting of -(CH<sub>2</sub>)<sub>a</sub>PO<sub>3</sub>H<sub>2</sub>; -(CH<sub>2</sub>)<sub>a</sub>NO<sub>2</sub>; -(CH<sub>2</sub>)<sub>a</sub>OH; -(CH<sub>2</sub>)<sub>a</sub>SO<sub>3</sub>H; -(CH<sub>2</sub>)<sub>a</sub>SO<sub>2</sub>H; O(CH<sub>2</sub>)<sub>a</sub>PO<sub>3</sub>H<sub>2</sub>; -O(CH<sub>2</sub>)<sub>a</sub>COOH; -O(CH<sub>2</sub>)<sub>a</sub>NO<sub>2</sub>; -O(CH<sub>2</sub>)<sub>a</sub>SO<sub>2</sub>H; -O(CH<sub>2</sub>)<sub>a</sub>SO<sub>3</sub>H; -O(CH<sub>2</sub>)<sub>a</sub>OH; -NH(CH<sub>2</sub>)<sub>a</sub>COOH; -NH(CH<sub>2</sub>)<sub>a</sub>NO<sub>2</sub>; -NH(CH<sub>2</sub>)<sub>a</sub>SO<sub>2</sub>H; -NH(CH<sub>2</sub>)<sub>a</sub>PO<sub>3</sub>H<sub>2</sub> and NH(CH<sub>2</sub>)<sub>a</sub>SO<sub>3</sub>H; wherein a is 1 to about 4.

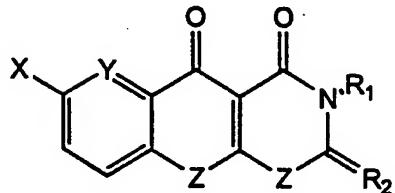

20 87. The method of Claim 84 wherein the compound is of the general formula

25 wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 84 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

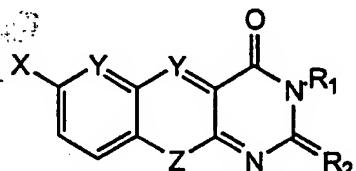

-89-

88. The method of Claim 84 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 84 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

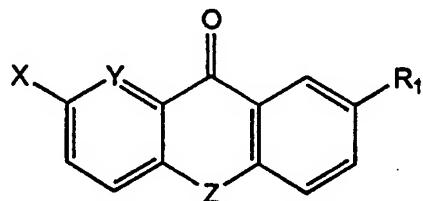

5 89. The method of Claim 84 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 84 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

90. The method of Claim 84 wherein the compound is of the general formula

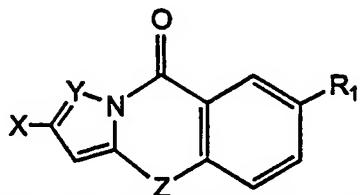

10

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 84 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

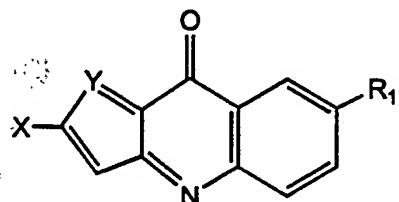

-90-

91. The method of Claim 84 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 84 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

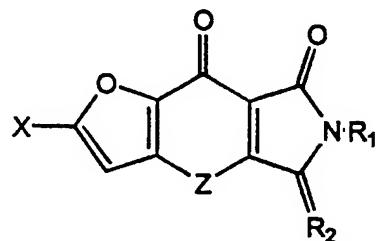

5 92. The method of Claim 84 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 84 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

93. The method of Claim 84 wherein the compound is of the general formula

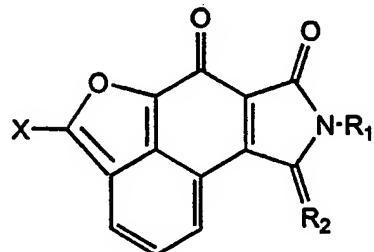

10

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 84 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

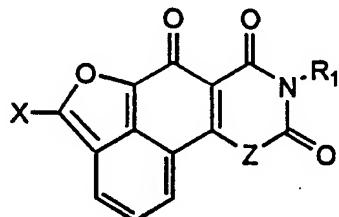

-91-

94. The method of Claim 85 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 85 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

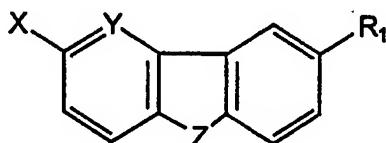

5 95. The method of Claim 85 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 95 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

96. The method of Claim 84 wherein the compound is of the general formula

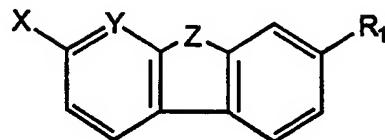

10

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 84 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

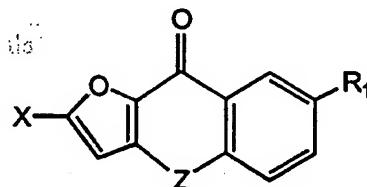

-92-

97. The method of Claim 84 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 84 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

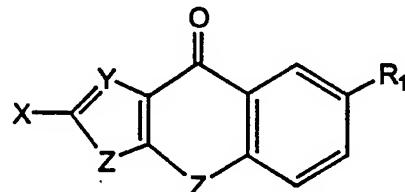

5 98. The method of Claim 84 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 84 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

99. The method of Claim 84 wherein the compound is of the general formula

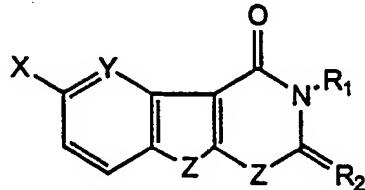

10

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 84 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

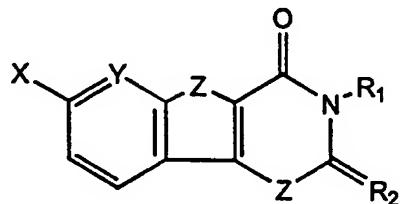

-93-

100. The method of Claim 84 wherein the compound is of the general formula

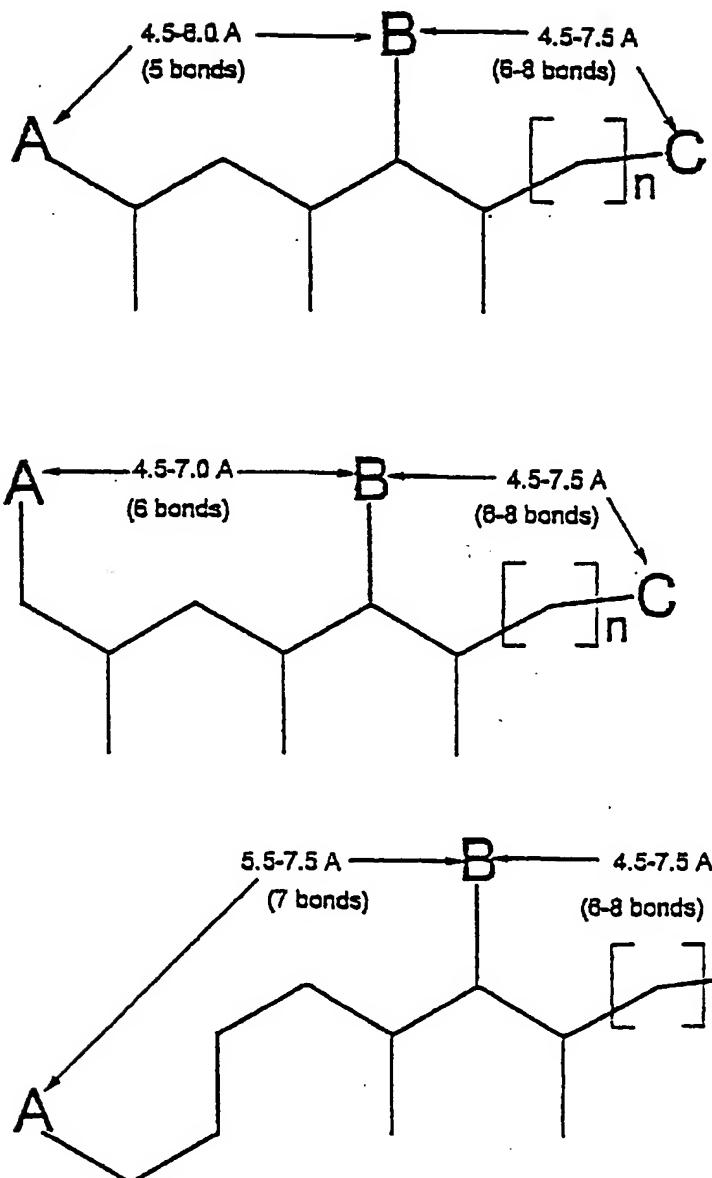

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 84 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

5 101. The method of Claim 84 wherein the compound is of the general formula

wherein X, Y, Z and R<sub>1</sub> have the meanings given for these variables in Claim 84 and R<sub>2</sub> is O, S, CH<sub>2</sub>, or N-R<sub>3</sub>, wherein R<sub>3</sub> is H, OH, alkyl and aryl.

A-C denote electronegative atoms

$n = 3 - 5$

# INTERNATIONAL SEARCH REPORT

International Application No

PCT/CA 00/00542

**A. CLASSIFICATION OF SUBJECT MATTER**  
 IPC 7 C07D221/14 A61K31/473 C07D209/48 A61K31/4035 A61P25/28

According to International Patent Classification (IPC) or to both national classification and IPC

**B. FIELDS SEARCHED**

Minimum documentation searched (classification system followed by classification symbols)  
 IPC 7 C07D A61K A61P

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

EPO-Internal, WPI Data, PAJ, CHEM ABS Data

**C. DOCUMENTS CONSIDERED TO BE RELEVANT**

Category	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
A	WO 98 17278 A (ALLELIX BIOPHARMA ;CHEN XIANNONG (CA); TEHIM ASHOK (CA)) 30 April 1998 (1998-04-30) claims ---	1-100
A	EP 0 206 322 A (I P A INTERNATIONAL PHARMACEUT) 30 December 1986 (1986-12-30) claims ---	1-100

Further documents are listed in the continuation of box C.

Patent family members are listed in annex.

\* Special categories of cited documents :

- "A" document defining the general state of the art which is not considered to be of particular relevance
- "E" earlier document but published on or after the international filing date
- "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- "O" document referring to an oral disclosure, use, exhibition or other means
- "P" document published prior to the international filing date but later than the priority date claimed

- "T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- "X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- "Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- "Z" document member of the same patent family
